Medical Decision Making Harold C. Sox, Michael C. Higgins, Douglas K. Owens, Gillian Sanders Schmidler, 2024-02-27 MEDICAL DECISION MAKING Detailed resource showing how to best make medical decisions while incorporating clinical practice guidelines and decision support systems Sir William Osler a legendary physician of an earlier era once said Medicine is a science of uncertainty and an art of probability In Osler's day and now decisions about treatment often cannot wait until the diagnosis is certain Medical Decision Making is about how to make the best possible decision given that uncertainty The book shows how to tailor decisions under uncertainty to achieve the best outcome based on published evidence features of a patient's illness and the patient's preferences Medical Decision Making describes a powerful framework for helping clinicians and their patients reach decisions that lead to outcomes that the patient prefers That framework contains the key principles of patient centered decision making in clinical practice Since the first edition of Medical Decision Making in 1988 the authors have focused on explaining key concepts and illustrating them with clinical examples For the Third Edition every chapter has been revised and updated Written by four distinguished and highly qualified authors Medical Decision Making includes information on How to consider the possible causes of a patient's illness and decide on the probability of the most important diagnoses How to measure the accuracy of a diagnostic test How to help patients express their concerns about the risks that they face and how an illness may affect their lives How to describe uncertainty about how an illness may change over time How to construct and analyze decision trees How to identify the threshold for doing a test or starting treatment

How to apply these concepts to the design of practice guidelines and medical policy making Medical Decision Making is a valuable resource for clinicians medical trainees and students of decision analysis who wish to fully understand and apply the principles of decision making to clinical practice *Controllable Artificial Intelligence and the Future of Law* Hugo Luz dos Santos,2025-11-08 This book broaches the newly crafted concept of algorithmic dictatorship that draws on a plethora of human biases that creep into the algorithm and feeds into an automated decision that comes to the expense of citizens lives freedoms health property fair lending and credit scoring This book sheds a keen light on the slew of reasons in view of which artificial intelligence should be both interpretable and controllable as opposed to merely explainable The reason for that is straightforward the skewed data baked into the bigoted algorithms machine biases spawns harrowing effects with which criminal justice has been grappling for a long haul drawn out Tallyingly and perhaps unsurprisingly law enforcement evinces biases that run along both gender and race lines No surprise springs from the fact that computer generated algorithms that propel predictive policing are often flagged as tools whereby racial discrimination abounds It should not therefore be pegged as flabbergasting that this sort of shady algorithmic governance is a byproduct of a grueling algorithmic dictatorship that is shaping up to crumble the foundations of Rule of Law upon which stands modern societies This is one of the key takeaways of this book Disturbingly enough brain computer interfaces are poised to be converted into shady tools to collate gauge thoughts emotions sentiments and crime related information that would be otherwise inaccessible to the governments rogue nations or unscrupulous actors prying eyes Much to our dismay an eerily dystopian world is unfolding before our very eyes This is the gist of transhumanism a byproduct of convolutional neural networks that revolve around deep learning genetic algorithms that will overhaul the current legal landscape beyond recognition This book charts the path ahead as to draw set in stone boundaries to prevent jurisdictions from careening into the chaos of genetic plutocracy that should be wished away

democracy challenge and respond to the aftermath of the COVID 19 pandemic Proposed are a set of democratic innovations ranging from citizens assemblies to regulatory gaming to citizens initiatives and lobbying which are complementary not antagonistic to existing representative democracy across the European continent These innovations are emerging bottom up across the continent and getting traction at local national and EU level in a new era powered by technology This book brings together academics as well as practitioners to give a forward looking holistic view of the realities of EU citizen participation across the spectrum of participatory opportunities They all converge in arguing that after many years of proven experimentation the EU must institutionalize supranational participative and deliberative democratic channels to complement representative democracy and each other and ultimately improve the effectiveness of EU citizen participation While this institutional approach will not magically treat the EU democratic malaise it should make the system more intelligible accessible and ultimately responsive to citizen demand without necessarily undertaking Treaty reform The attempt to harness citizen participation to help address the current EU crisis needs the type of multi faceted approach presented in this book One that recognises the potential of existing and new democratic mechanisms and also importantly the links between different instruments of citizen participation to improve the overall quality of EU s democratic system
