Tello,1988 This book is focuses on AI Artificial Intelligence as well as its impact on such practical areas as advanced user interfaces intelligent data management and knowledge acquisition In this pages you will learn What AI is and how to put AI to work for you Which AI tools currently exist how they work and what you can do with them The fundamentals of natural language and decision modeling systems How to develop an expert system Advanced AI concepts including truth maintenance planning systems understanding and machine learning AI programming and AI programming languages including LISP Prolog and Smaltalk *Exploring Artificial Intelligence on Your IBM PC* Tim Hartnell,1986 *Approaching human intelligence through chemical systems: Development of unconventional chemical artificial intelligence* Pier Luigi Gentili,Konrad Szaciłowski,Andrew Adamatzky,2023-11-27 Although human intelligence is deeply investigated by neuroscientists psychologists philosophers and AI researchers we still lack of a widely accepted definition of what it is If we exploit the emergence theory from Complexity Science to give a definition we might state that human intelligence is the emergent property of the human nervous system Such fascinating emergent property allows us to handle both accurate and vague information by computing with numbers and words Moreover it allows us to reason speak and take rational decisions in an environment of uncertainty partiality and relativity of truth when the Incompatibility Principle holds As the complexity of a system increases accuracy and significance become

almost mutually exclusive characteristics of our statements Finally our intelligence allows us recognizing quite easily variable patterns Therefore it is worthwhile investigating human intelligence and trying to mimic it by developing Artificial Intelligence Nowadays Artificial Intelligence is in vogue it is applied in both basic and applied science Traditionally there are two strategies to develop Artificial Intelligence A strategy consists in writing human like intelligent software running in von Neumann computers or special purpose hardware The other strategy consists in neuromorphic engineering Neuromorphic engineering implements surrogates of neurons through non biological systems either for neuro prosthesis or to design brain like computing machines A third strategy is now blooming and it consists in using molecular supramolecular materials and systems chemistry to mimic some basic functions of human intelligence such as Boolean multi valued logic gates and Fuzzy logic This third strategy is originating Chemical Artificial Intelligence CAI A relevant purpose of CAI is to design modules for Chemical Robots A Chemical Robot is thought of as a molecular assembly that reacts autonomously to its environment by probing it with molecular sensors making decisions by its intrinsic Artificial Neural Networks or logic gates and performing actions upon its environment through molecular effectors The intelligent activities of any Chemical Robot should be sustained energetically by a metabolic unit Chemical Robots should be easily miniaturized and implanted in living beings to interplay with cells or organelles for biomedical applications They should become auxiliary elements of the natural immune system
