A. Musleh Al-Sartawi, Arafat Salih Aydiner, 2025-07-28 The concept of the circular economy has attracted the attention of scholars researchers professionals and policymakers in recent years The notion is characterised as an economy that intends to keep products stocks work in progress and materials at their highest utility and value continually distinguishing between their technical and biological cycles It is devised as a continuous positive development cycle that reserves and improves natural resources

optimizes outputs and minimizes supply chain related risks by overseeing limited stocks and renewable flows of the stocks. Several legislations and policies are being developed to motivate and integrate SDGs and net zero related approaches in companies among which the circular economy CE is gaining momentum due to its documented impact on the elements of the SDGs and net zero. Efficient management of resources and utility via artificial intelligence is vital towards a smart circular economy by minimising waste losses pollution and extraction of virgin resources. It is important to note that there is a difference between smart and traditional circular economies. This book focuses on the former and makes distinctions in terms of how technology systems and solutions can be effectively and efficiently implemented. This book, *The Paradigm Shift from a Linear Economy to a Smart Circular Economy: The Role of Artificial Intelligence Enabled Systems, Solutions and Legislations*, discusses the transition from linear to smart circular economy by dissecting the role of artificial intelligence and other technologies such as big data, IoT and blockchain in such transformations. The book further aims to provide a platform for researchers, professionals and students to closely investigate, discuss and examine the theories, philosophies, ontologies and the role of governments, policymakers and businesses in supporting the transition to a smart economy via national initiatives, fiscal policies and corporate governance. The book highlights the need for collaborative efforts between various actors including the private and public sectors through cross disciplinary approaches to attain, maintain and sustain a smart circular economy. Research and Innovation Forum 2024, Anna Visvizi, Orlando Troisi, Vincenzo Corvello, Mara Grimaldi, 2025-07-26. This book features research presented and discussed during the Research Innovation Forum Rii Forum 2024. As such, this book offers a unique insight into emerging topics, issues and developments pertinent to the fields of technology innovation and education and their social impact. Papers included in this book apply inter and multi disciplinary approaches to query such issues as technology enhanced teaching and learning, smart cities, information systems, cognitive computing and social networking. What brings these threads of the discussion together is the question of how advances in computer science, which are otherwise largely incomprehensible to researchers from other fields, can be effectively translated and capitalized on so as to make them beneficial for society as a whole. In this context, Rii Forum and Rii Forum proceedings offer an essential venue where diverse stakeholders including academics, the think tank sector and decision makers can engage in a meaningful dialogue with a view to improving the applicability of advances in computer science.
