Those responsible for creating compelling visual content to represent a brand, product, or concept will also find this book useful. Basic knowledge of web user interfaces will be helpful but not required.

The Role of Generative AI in the Communication Classroom Elmoudden, Sanae, Wrench, Jason S., 2024-02-12. In an era marked by the rapid integration of Artificial Intelligence (AI) into our lives, the discourse surrounding its implications has intensified. *The Role of Generative AI in the Communication Classroom* is a pioneering book that delves into the multifaceted dimensions of AI, specifically focusing on OpenAI's revolutionary Chat Generative Pre-Trained Transformer (Chat GPT) and its profound influence on the landscape of communication education. This book navigates the intersection of technology, education, and ethics, shedding light on the imperative need for a collaborative approach to shape AI's evolution. AI's potential to reshape industries and human roles is undeniable. Rooted in the intricate workings of AI and its hallmark, Chat GPT, this book meticulously dissects the dynamic relationship between humans and machines. The discourse extends beyond technology and into the realm of education, asserting that the power to mold AI's trajectory cannot rest solely in the hands of developers. While revealing AI's transformative potential in the communication classroom, the book conscientiously explores ethical concerns and biases, fostering a balanced approach to its integration. This book is instrumental to the ongoing discourse on AI's role in education. The call for ethical considerations, inclusivity, and regulation serves as a guiding compass for educators, students, developers, and policymakers alike. The book ensures a holistic perspective on AI's integration by addressing privacy, citation, voice ownership, and overall digital ethics.

The Big Red Book of Advanced Technology Harry Katzan Jr., 2025-11-10. This book is a collection of four books: *The Little Red Book of Artificial Intelligence*, *The Little Red Book of Service Science*, *The Little Red Book of Managing Uncertainty*, and *The Little Red Book of Cybersecurity, Cloud Computing, and Systems Ontology*. The first book contains a gentle introduction to Artificial Intelligence, generally referred to as AI. It is not a textbook and not a reference book. It is intended for persons who desire to know what AI is all about but do not know very much about the subject to start with. It also covers about what AI is already, but it is more than that. It does answer the question: Can a machine think? Even though most people are quite tired of that question, in fact, people are now more interested in what is going on. This book is special because the interests of the reader are taken into consideration. It is not for Artificial Intelligence experts, and it is not an ego trip to enhance the author's reputation. This book is also about service, a concept that is part of our daily lives. Almost everything we do is related to service. Even if we don't recognize it, doctors, lawyers, and truck drivers all perform a service that is obvious. There is a real science to service. You can find out about it by reading this book. A good thing about this book is that you can open the book and start reading at any point and be able to clearly understand the subject matter. If you aren't one already, people will think you are a genius. Believe me, there is an

introductory section of the book with three flavors Cybersecurity Cloud Computing and Systems Ontology all related to computers artificial intelligence and managing uncertainty It is not intended for specialists It is too simple for them As unusual as that sounds there is a very good reason for its existence There are existing books on the subjects that are very good but are very difficult to read It s straightforward The concepts are complicated and some require complex math Cybersecurity is about maintaining a secure envirnment for just about everything we do with computers Cloud computing is intendedd to share the computer space beterrn organization and people Ontology is then study what exists It is philosophical Ontology is about the existence of things that exist and how to describe and analyze them In the world of philosophy there are two basic concepts there are synthetic things and analytic things Synthetic things are based on ideas Analytic things are about things that actually exist That s a bit simple but it is all we need at the moment How is it that we can know about things that exist We have to be able to describe them It s that simple This last book covers the subject of managing uncertainty It is both a text book and a reference book on the application of Dempster Shafer theory that has commanded a lot of attention in the business community There is not much written on using the techniques and that is unfortunate The methods are extremely powerful and management and technical persons should know of their existence A math background is not required to read and use the methods even though some math descriptive techniques are necessary for efficiency of expression Actually the reader only needs to find out what can be done without having to actually do it Finally have a pleasurable reading You deserve it

Getting Skills Right Training Supply for the Green and AI Transitions Equipping Workers with the Right Skills OECD,2024-12-11 Adult learning systems are being called upon to prepare workers for major labour market shifts including the green transition and the rise of artificial intelligence AI in the workplace While initial education is important upskilling and reskilling the existing workforce is essential to help individuals and businesses adapt and prepare for these transitions Policy makers face the challenge of ensuring training is both relevant and inclusive yet there is limited understanding of whether current training supply is sufficient to meet current and future skill needs Most research focuses on the demand for skills with little insight into the supply To fill this gap this report uses evidence from new OECD questionnaires and an analysis of training catalogues to evaluate whether current training supply aligns with the skills needed for the green and AI transitions It also provides insight into the accessibility and flexibility of training efforts to guide policy makers in their efforts to develop more effective inclusive training strategies
