Futureproofing Engineering Education for Global Responsibility Michael E. Auer, Tiia Rüttemann, 2025-03-22 This book contains papers in the fields of Collaborative learning Digital transition in education AI and learning analytics in engineering education Diversity in engineering education The authors are currently witnessing a significant transformation in the development of education on all levels and especially in post secondary and higher education To face these challenges higher

education must find innovative and effective ways to respond in a proper way. Changes have been made in the way we teach and learn including the massive use of new means of communication such as videoconferencing and other technological tools. Moreover, the current explosion of artificial intelligence tools is challenging teaching practices maintained for centuries. Scientifically based statements as well as excellent best practice examples are necessary for effective teaching and learning engineering. The 27th International Conference on Interactive Collaborative Learning ICL2024 and 53rd Conference of International Society for Engineering Pedagogy IGIP which took place in Tallinn Estonia between 24 and 27 September 2024 was the perfect place where current trends in higher education were presented and discussed. IGIP conferences have been held since 1972 on research results and best practices in teaching and learning from the point of view of engineering pedagogy science. ICL conferences have been held since 1998 being devoted to new approaches in learning with a focus on collaborative learning in Higher Education. Nowadays the ICL conferences are a forum of the exchange of relevant trends and research results as well as the presentation of practical experiences in learning and Engineering Pedagogy. In this way the authors try to bridge the gap between pure scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, schoolteachers, learning industry, further and continuing education lecturers, etc.

AI and ChatGPT Technology in Education Karen Borgnakke, 2025-11-13
This monograph explores AI applications in education, arguing that ChatGPT, rooted in language models and machine learning, must be understood within the practical contexts of AI use. To do so, this analysis draws on social and humanistic theories of language and communication. The opening chapters introduce tools to analyze the chatbot's text and its human-like language. The discussion then follows the political debate around AI chatbots, both banned and embraced, moving from policy to practice. Through ethnographic case studies, the book contrasts official narratives with how chatbots function in real-world settings. This book is suited for researchers, faculty, students, and professionals in social sciences, psychology, education, communication, teacher training, IT, and learning technologies.
