Breaking Things at Work Gavin Mueller, 2021-02-09 An exhilarating challenge to the way we think about work technology progress and what we want from the future In the 19th century English textile workers responded to the introduction of new technologies on the factory floor by smashing them to bits For years the Luddites roamed the English countryside practicing drills and maneuvers that they would later deploy on unassuming machines The movement has been derided by scholars as a backwards looking and ultimately ineffectual effort to stem the march of history for Gavin Mueller the movement gets at the heart of the antagonistic relationship between workers all workers including us today and the so called progressive gains secured by new technologies The luddites weren't primitive or even anachronistic they are still a force however unconsciously in the workplaces of the 21st century world Breaking Things at Work is an innovative rethinking of labor and machines leaping from textile mills to algorithms from existentially threatened knife cutters of rural Germany to surveillance evading truckers driving across the continental United States Mueller argues that the future stability and empowerment of working class movements will depend on subverting these technologies and preventing their spread wherever possible The task is high but the seeds of this resistance are already present in the Neo Luddite efforts of hackers pirates and dark web users who are challenging surveillance and control often through older systems of communication technology

AI Chatbots in Customer Service Evgeny

Kagan, Maqbool Dada, Brett Hathaway, 2022 Despite recent advances in language processing algorithms chatbot technology continues to face adoption hurdles We survey chatbot users about their experiences and use their testimonies to construct a decision model of customer choice between the chatbot service channel and the live agent service channel The fundamentals of this choice are the time spent in line and in service the chatbot's success rate and the qualitative differences in the service experience provided by the chatbot and by the live agent We then conduct experiments in which participants choose and then experience the chatbot or the live agent channel as we vary operational i.e. times spent and chatbot success rates and qualitative features of the chatbot We find that users respond positively to improvements in chatbot operational performance however the chatbot channel remains underutilized relative to what expected time minimization would predict Additional experiments show that this underutilization is caused by two separate mechanisms algorithm aversion aversion to an algorithmic service provider and gatekeeper aversion aversion to any service format that may involve multiple stages Examining potential remedies we find that algorithm aversion can be mitigated by making salient the expected time savings offered by the chatbot However gatekeeper aversion is more persistent and harder to overcome We conclude by building and estimating a structural model of channel demand and by proposing a behavior aware service design that reduces the firm's staffing costs by up to 22%
