M. Buckner, 2014-04-01 In a future of AI and clones identity is at risk A cyberpunk thriller from the first clear cut new star of twenty first century SF Robert J Sawyer In the 23rd century the Earth's surface is devastated by global warming and corporations exploit billions of poverty stricken employees whose lifetime contracts they own Richter Jeds the rich powerful CEO of ZahlenBank wants to live forever so he makes two copies of himself One is an evolved Artificial Intelligence imprinted with his personality The other is a perfect clone named Dominic whom he raises as his son When Richter suddenly dies his son Dominic is left to deal with a terrible crisis which threatens ZahlenBank And though Dominic loathes the egotistical AI masquerading as his father they need each other's help to save the bank Which of them is the true copy and which is fake Do they have free will or are their destinies programmed in their source code And most important of all does individual identity still have any meaning This book was originally published under the title Neurolink THEORY AND APPLICATIONS IN DEEP LEARNING Dr. Shashi, Rashi Rastogi, Renato Racelis Maaliw III, Dr. Ashok Kumar, 2023-04-24 Deep learning is a subfield of computer science that is currently focusing the majority of its attention on the areas of video picture text and speech recognition in addition to autonomous driving robotics healthcare and other areas This is in addition to other areas such as robotics and healthcare Academics and academicians are currently showing a significant amount of interest in the field of deep learning This is because it is a subfield of study that focuses a significant emphasis on achieving outcomes which explains why this is the case Rina Dechter was the first person to use the phrase deep learning in 1986 and the building of an intelligent computer that could emulate the functioning of the human brain was the driving force behind the

expansion of this field of study The term deep learning was coined by Rina Dechter who was also the first person to use the term The human brain which is in charge of decision making is the most important organ in the body In order for the brain to arrive at its conclusions it takes in data through its five senses sight smell touch and hearing Memory is another item that is stored in the brain and it is this memory that may be used to solve complicated problems by drawing on experiences that have been gained in the past Throughout the course of the past few decades scientists have kept alive the dream that they may one day be able to design a computer with intellect comparable to that of our own brains In order to make progress towards achieving this goal they have initiated research into the fundamental make up and operation of the human brain One of the primary motivations behind the development of autonomous vehicles as well as robots that are capable of performing a variety of functions is the reduction in the number of collisions that take place along roadways This can be accomplished through the use of robots that are multi functional Because it is estimated by the World Health Organization WHO that 1 35 million people lose their lives on the roads of the world each year and since it is estimated that more than 90 percent of those deaths are the result of human errors that could have been avoided **PC AI** ,1990 *Mathematical Intelligence* Mubeen Junaid,2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems
