**Color Imaging: Device-independent Color, Color Hard Copy, and Graphic Arts**, 2001 Optical Nano- and Microsystems for Bioanalytics Wolfgang Fritzsche, Jürgen Popp, 2012-02-04 This book describes the state of the art in the field of bioanalytical nano and microsystems with optical functionality In 12 chapters distinguished scientists and leaders in their respective fields show how various optical technologies have been miniaturized and integrated over the last few decades in order to be combined with nano and microsystems for applications in the life sciences The main detection and characterization technologies are introduced and examples of the superiority of these integrated approaches compared to traditional ones are provided Examples from e g the fields of optical waveguides integrated interferometers surface plasmon resonance or Raman spectroscopy are introduced and discussed and it is shown how these approaches have led to novel functionalities and thereby novel applications

**Digital Color Imaging Handbook** Gaurav Sharma, Raja Bala, 2017-12-19 Digital technology now enables unparalleled functionality and flexibility in the capture processing exchange and output of color images But harnessing its potential requires knowledge of color science systems processing algorithms and device characteristics topics drawn from a broad range of disciplines One can acquire the requisite background with an armload of physics chemistry engineering computer science and mathematics books and journals or one can find it here in the Digital Color Imaging Handbook Unprecedented in scope this handbook presents in a single concise and authoritative publication the elements of these diverse areas relevant to digital color imaging The first three chapters cover the basics of color vision perception and physics that underpin digital color imaging The remainder of the text presents the technology of color imaging with chapters on color management device color characterization digital halftoning image compression color quantization gamut mapping computationally efficient transform algorithms and color image processing for digital cameras Each chapter is written by world class experts and largely self contained but cross references between chapters reflect the topics important interrelations Supplemental materials are available for download from the CRC Web site including electronic versions of some of the images presented in the book

**Enabling Technologies for Wireless E-Business** Weidong Kou, Yelena Yesha, 2006-12-15 Advances in wireless technologies promise to revolutionize the way we conduct business This book provides complete coverage of the enabling technologies needed to make wireless e business effective These include wireless security mobile payment location based services mobile data management and RFID technologies The authors are highly distinguished Dr Weidong Kou is a Chief Architect and a Senior Manager of IBM Greater China Group and a Laureate of 2004 Friendship Award of China Dr Yelena Yesha is an Exceptional Research Professor in the Department of Computer Science and Electrical Engineering at the University of Maryland This book is an ideal introduction for both self study and taught e business classes or commercial training

**Modelling appearance printing** Alina Pranovich, 2024-04-05 Colour perception is fundamental to our everyday experiences allowing us to communicate and interpret visual information effectively Yet replicating these experiences accurately poses a significant challenge particularly in the context of full colour 3D printing Advances in this field have revolutionised the fabrication of customised prosthetic body parts such as eyes teeth and skin features with profound implications for medical and aesthetic applications The key to successful 3D printing lies in the digital preview of objects before fabrication enabling users to assess colour reproduction and quality However accurately representing colour in a digital environment is complex as it depends on numerous factors including illumination object shape surface properties scene context and observer characteristics Traditional methods of previewing conventional 2D prints overlook this complexity This thesis addresses this challenge by focusing on two types of materials semitransparent polymers commonly used in 3D printing and goniochromatic colorants employed in printing to introduce unique effects unattainable with conventional inks for 2D printing For semitransparent materials we developed an empirical function to represent colour based on sample thickness enabling efficient digital representation Additionally we adapted a colour measuring device to identify two key material parameters absorption and scattering coefficients essential for accurate colour reproduction Goniochromatic materials such as thin film coated mica particles are slightly more complicated and less predictive in terms of their final colour appearance Although not yet used in 3D printing these particles used in conventional printing introduce colour variation while rotating the print We found that goniochromatic properties can be expressed with an empirically found function after collecting angle dependent light reflecting properties of the sample We used this function and showed how prints with goniochromatic materials can be efficiently previewed on a computer monitor [Intelligent Information and Database Systems](#) Ngoc Thanh Nguyen, Chong-Gun Kim, Adam Janiak, 2011-04-04 The two volume set LNAI 6591 and LNCS 6592 constitutes the refereed proceedings of the Third International Conference on Intelligent Information and Database
