Quark Confinement And The Hadron Spectrum - Proceedings Of The International Conference Nora Serafina Brambilla, Giovanni Maria Prosperi, 1995-03-29 The 20 year old problem of the confinement and the resulting spectrum of the bound states is central to quantum chromodynamics QCD Many approaches have been tried starting from different points of view the potential theory the Bethe Salpeter equation string and flux tube models bag models vacuum structure current algebra lattice theory and numerical simulations Phenomenological assumptions and first principle theoretical results or indications have been combined Many partial successes have been attained but a unified and comprehensive treatment is still lacking In recent years new attention has been given to the problem both in terms of theoretical developments and for the purpose of evaluating the spectrum and other properties of the particles In particular attention has been focussed on areas like numerical simulations the derivation of the potential the use of the Bethe Salpeter equation the connection between the potential and the chiral symmetry approach This workshop was an opportunity for a synthesis and a comparison of the different points of view

Hadronic Matter , New Physics At The Large Hadron Collider - Proceedings Of The Conference Harald Fritzsch,2016-10-27 The Standard Theory of Particle Physics describes successfully the observed strong and electroweak interactions but it is not a final theory of physics since many aspects are not understood 1 How can gravity be introduced in the Standard Theory 2 How can we understand the observed masses of the leptons and quarks as well as the flavor mixing angles 3 Why are the masses of the neutrinos much smaller than the masses of the charged leptons 4 Is the new boson discovered at CERN the Higgs boson of the Standard Theory or an excited weak boson 5 Are there new symmetries at very high energy e g a broken supersymmetry 6 Are the leptons and quarks point like or composite particles 7 Are the leptons and quarks at very small distances one dimensional objects e g superstrings This proceedings volume comprises papers written by the invited speakers discussing the many important issues of the new physics to be discovered at the Large Hadron Collider

Quark Confinement And The Hadron Spectrum Iv Wolfgang Lucha, Maung Maung Khin,2002-02-27 Quantum chromodynamics is generally accepted to be the quantum field theory which describes the strong interactions in elementary particle physics However the question of the mechanism responsible for the confinement of the color degrees of freedom of quarks and gluons into hadrons still ranks as one of the most interesting open problems in physics This proceedings volume summarizes the state of the art in this area of research Mathematically inclined readers will find the articles based on monopoles vortices and topology most interesting Meanwhile lattice calculations can be performed for many important physical quantities Their results can be used as guidelines for developing models of quark confinement These models are indispensable for theoretical physicists performing calculations with the Bethe Salpeter equation Dyson Schwinger equations effective Hamiltonians and potential models The cross fertilization of all these subfields of research becomes evident from the articles in this book A few experimental papers are also included
