Planteydt,2012-12-06 by W J Hunter In 1977 a report of a Working Group of experts prepared for the Commission of the European Communities was published entitled Public Health Risks of Exposure to Asbestos EUR 5653e 1 This report contained several conclusions and recommendations one of the latter stated that a mesothelioma register should be set up in those countries of the EEC where none exist in accordance with criteria and procedures agreed upon by a panel of pathologists Acting upon this recommendation the Commission established a C E C Mesothelioma Panel which has as one of its basic objectives the standardization of the pathological diagnosis of mesotheliomas by exchange of information between members of National Panels Since its establishment several meetings have been held and much useful information has been exchanged This work has been underlined by the adoption by the Council of Ministers of a Directive on the protection of workers from the risks related to asbestos at 2 work which requires Member States to keep a register of recognized cases of mesothelioma To assist Member States in the establishment of such registers the Commission of the European Communities considered it would be useful for an illustrated book on mesotheliomas to be prepared Three pathologists who are members of the C E C Mesothelioma Panel have undertaken this task and this publication is the result **Color Atlas of Cancer**

Pathology of the Mesothelium John S.P. Jones,2012-12-06 Many books have been

written about the pathology of the major organs of the body such as the lungs heart gastrointestinal tract etc Included in these are descriptions often with a minor emphasis of pathological conditions which affect their serosal surfaces In this book I have endeavoured to reverse the process and treat the mesothelium as an organ in its own right rather than being the no man s land between various major structures A number of pathological conditions are common to the coverings of the three major body cavities the pleura pericardium and peritoneum while some abnormalities are exclusive to one or other sites I hope that the contents of this book cover a broad enough spectrum of mesothelial diseases to be of help to service pathologists who are ever increasingly being asked to make diagnoses particularly on small biopsies of pleural and peritoneal tissues It is also my hope that the various aspects of the subject have been dealt with in sufficient depth to be of use to pathologists engaged in teaching and research and to those whose interests lie in the structure and function of the mesothelium There is still much to be learned in understanding the way the mesothelium behaves in the realm of both inflammatory response and tumour formation If this book provides a stimulus to furthering research in these fields I feel it will have achieved its objective **Colour Atlas of Anatomical Pathology** Robin A. Cooke,Brian Stewart,1995 This is a collection of photographs of unfixed pathological specimens It is designed for undergraduate medical students and trainees in surgery and pathology It removes the need for examining museum specimens and should be useful for pathology spot exam questions
