Harness the power of color in your painting with Color Theory for the Makeup Artist. Katie Middleton, 2018-06-12. Color Theory for the Makeup Artist: Understanding Color and Light for Beauty and Special Effects analyzes and explains traditional color theory for fine artists and shows how to apply it directly toward makeup applications. Makeup artists control color the same way a painter does. They choose color palettes, match colors, blend new colors, and create designs on a canvas that is always changing. Some colors cancel others, some balance each other, and some oppose other colors. However, painters seldom have to consider inconsistencies in how their art will be lit and where it will be displayed the way that a makeup artist does. This book teaches how to mix any color using just red, yellow, blue, and white. It discusses the reason for variations in skin colors and undertones and how to identify and match these using makeup while choosing flattering colors for the eyes, lips, and cheeks. Colors found inside the body are explained for special effects makeup like why we bruise, bleed, or appear sick, and ideas and techniques are also described for painting prosthetics. The book also explains how lighting affects color on film, television, theater, and photography sets and how to properly light a workspace for successful applications. Whether you are a professional or a beginner, you will never stop learning. There will always be new products, techniques, and fashions; this book provides guidance and inspiration to keep practicing, creating, and honing your skills.

How to See Color and Paint It Arthur Stern, 2021-12. Learn to see and mix any color with extraordinary precision. Many painters don't paint what they see but what they expect to see, what they think they see, what they remember, or what they imagine things are supposed to look like. Since the mind stands in the way of the eye, the purpose of this revolutionary book is to train you to paint what your eye actually sees. Arthur Stern claims that color is key to painting what you see. After working with three generations of students, he developed a program of 22 painting projects that teach the artist to observe, identify, mix, match, and paint the colors of the world with remarkable accuracy. Using a painting knife and oil paint, you learn to analyze every painting subject as a series of distinct color areas called color spots and place each spot on the canvas as a unique and vivid mixture. The fundamental lesson of the book is that if you put the right color

spot in the right place you create a realistic image of form space surface texture atmosphere light and shade As you follow the painting projects in this book you ll make the dramatic discovery that everything in nature is filled with luminous color You ll learn to see glowing color in the blackest shadow and the whitest linen You ll learn when a green can appear red how to use paint to replicate metal glass wood paper porcelain and other opaque transparent or textured surfaces Before long you ll be seeing a multitude of colors in a slice of bread apples and oranges and a mass of green leaves You ll learn how to paint quickly enough to capture a live still life a flower that moves and slowly dies as you paint it You ll even practice with a setup outdoors to see how sunlight and skylight affect color

How to See Color and Paint It is a must for beginners and a valuable asset for intermediate artists who want to develop a more subtle perception of color A final section contains beautiful paintings of many subjects that have grown out of projects and ideas taught in this book 130 color plates 40 black white illustrations
