**Graphs, Colourings and the Four-Colour Theorem** Robert A. Wilson,2002-01-24 The four colour theorem is one of the famous problems of mathematics that frustrated generations of mathematicians from its birth in 1852 to its solution using substantial assistance from electronic computers in 1976 The theorem asks whether four colours are sufficient to colour all conceivable maps in such a way that countries with a common border are coloured with different colours The book discusses various attempts to solve this problem and some of the mathematics which developed out of these attempts Much of this mathematics has developed a life of its own and forms a fascinating part of the subject now known as graph theory The book is designed to be self contained and develops all the graph theoretical tools needed as it goes along It includes all the elementary graph theory that should be included in an introduction to the subject before concentrating on specific topics relevant to the four colour problem Part I covers basic graph theory Euler s polyhedral formula and the first published false proof of the four colour theorem Part II ranges widely through related topics including map colouring on surfaces with holes the famous theorems of Kuratowski Vizing and Brooks the conjectures of Hadwiger and Hajos and much more besides In Part III we return to the four colour theorem and study in detail the methods which finally cracked the problem

Taisbak, 1980      **A Norse Settlement in the Outer Hebrides** Niall Sharples, 2019-12-19 The settlement at Bornais in the Western Isles of Scotland is one of the largest rural settlements known from the Norse period in Britain It spans the period from the fifth to the fifteenth century AD when the Atlantic seaboard was subject to drastic changes The islands were systematically ravaged by Viking raiders and then colonised by Norse settlers In the following centuries the islanders were central to the emergence of the Kingdom of Man and the Isles played a crucial role in the development of the Lordship of the Isles and were finally assimilated into the Kingdom of Scotland This volume explores the stratigraphic sequence uncovered by the excavation of Bornais mounds 2 and 2A The excavation of mound 2 revealed a sequence of high status buildings that span the Norse occupation of the settlement One of these houses constructed at the end of the eleventh century AD was a well preserved bow walled longhouse and the careful excavation and detailed recording of the floor layers has revealed a wealth of finds that provides invaluable insight into the activities taking place in this building The final house in this sequence is very different in form and use and clearly indicates the increasing Scottish influence on the region at the beginning of the thirteenth century The excavation of mound 2A provides an insight into the less prestigious areas of the settlement and contributes a significant amount of evidence on the settlement economy The area was initially cultivated before it became a settlement local and throughout its life a focus on agricultural activities such as grain drying and processing appears to have been important In the thirteenth century the mound was occupied by a craftsman who produced composite combs gaming pieces and simple tools The evidence presented in this volume makes a major contribution to the understanding of Norse Scotland and the colonisation of the North Atlantic in a period of dramatic transformations      **Black & White** ,1891      **A catalogue of tracts, pamphlets, prints, and drawings, illustrating Oxfordshire.
