Combinatorial Methods in the Theory of Stochastic Processes L. Takacs, 1967-01-15 **Combinatorial methods in the theory of stochastic processes** Lajos Takács, 1977 Combinatorial Methods in Probability Theory Colloquium on Combinatorial Methods in Probability Theory, 1962 **The Foundations of Mathematics in the Theory of Sets** John P. Mayberry, 2000 This book presents a unified approach to the foundations of mathematics in the theory of sets covering both conventional and finitary constructive mathematics It is based on a philosophical historical and mathematical analysis of the relation between the concepts of natural number and set The author investigates the logic of quantification over the universe of sets and discusses its role in second order logic as well as in the analysis of proof by induction and definition by recursion Suitable for graduate students and researchers in both philosophy and mathematics Computational and Combinatorial Methods in Systems Theory Christopher I. Byrnes, Anders Lindquist, 1986 **Control Theory for Partial Differential Equations: Volume 2, Abstract Hyperbolic-like Systems Over a Finite Time Horizon** Irena Lasiecka, Roberto Triggiani, 2000-02-13 Originally published in 2000 this is the second volume of a comprehensive two volume treatment of quadratic optimal control theory for partial differential equations over a finite or infinite time horizon and related differential integral and algebraic Riccati equations Both continuous theory and numerical approximation theory are included The authors use an abstract space operator theoretic approach which is based on semigroups methods and which unifies across a few basic classes of evolution The various abstract frameworks are motivated by and ultimately directed to partial differential equations with boundary point control Volume 2 is focused on the optimal control problem over a finite time interval for hyperbolic dynamical systems A few abstract models are considered each motivated by a particular canonical hyperbolic dynamics It presents numerous fascinating results These volumes will appeal to graduate students and researchers in pure and applied mathematics and theoretical engineering with an interest in optimal control problems **Control Theory for Partial Differential Equations: Volume 1, Abstract Parabolic Systems** Irena Lasiecka, Roberto Triggiani, 2000-02-13 Originally published in 2000 this is the first volume of a comprehensive two volume treatment of quadratic optimal control theory for partial differential equations over a finite or infinite time horizon and related differential integral and algebraic Riccati equations Both continuous theory and numerical approximation theory are included The authors use an abstract space operator theoretic approach which is based on semigroups methods and which is unifying across a few basic classes of evolution The various abstract frameworks are motivated by and ultimately directed to partial differential equations with boundary point control Volume 1 includes the abstract parabolic theory for the finite and infinite cases and corresponding PDE illustrations as well as various abstract hyperbolic settings in the finite case It presents numerous fascinating results These volumes will appeal to graduate students and researchers in pure and applied mathematics and theoretical engineering with an interest in optimal control problems **The Theory of Information and Coding** Robert

McEliece, 2002-04-18 This is a self contained introduction to the basics of the theory of information and coding **Safety and Reliability. Theory and Applications** Marko Cepin, Radim Bris, 2017-06-14 Safety and Reliability Theory and Applications contains the contributions presented at the 27th European Safety and Reliability Conference ESREL 2017 Portoro Slovenia June 18 22 2017 The book covers a wide range of topics including Accident and Incident modelling Economic Analysis in Risk Management Foundational Issues in Risk Assessment and Management Human Factors and Human Reliability Maintenance Modeling and Applications Mathematical Methods in Reliability and Safety Prognostics and System Health Management Resilience Engineering Risk Assessment Risk Management Simulation for Safety and Reliability Analysis Structural Reliability System Reliability and Uncertainty Analysis Selected special sessions include contributions on the Marie Skłodowska Curie innovative training network in structural safety risk approaches in insurance and finance sectors dynamic reliability and probabilistic safety assessment Bayesian and statistical methods reliability data and testing organizational factors and safety culture software reliability and safety probabilistic methods applied to power systems socio technical economic systems advanced safety assessment methodologies extended Probabilistic Safety Assessment reliability availability maintainability and safety in railways theory big data risk analysis and management and model based reliability and safety engineering Safety and Reliability Theory and Applications will be of interest to professionals and academics working in a wide range of industrial and governmental sectors including Aeronautics and Aerospace Automotive Engineering Civil Engineering Electrical and Electronic Engineering Energy Production and Distribution Environmental Engineering Information Technology and Telecommunications Critical Infrastructures Insurance and Finance Manufacturing Marine Industry Mechanical Engineering Natural Hazards Nuclear Engineering Offshore Oil and Gas Security and Protection Transportation and Policy Making **Some Combinatorial Methods in the Theory of Numbers** Harold George Loomis, **Sample Survey Theory** Paul Kottnerus, 2012-11-12 This volume deals primarily with the classical question of how to draw conclusions about the population mean of a variable given a sample with observations on that variable Another classical question is how to use prior knowledge of an economic or definitional relationship between the population means of several variables provided that the variables are observed in a sample The present volume is a compilation of two discussion papers and some additional notes on these two basic questions The discussion papers and notes were prepared for a 15 hour course at Statistics Netherlands in Voorburg in February 2000 The first discussion paper is entitled A Memoir on Sampling and the Generalized Intrasample Correlation Coefficient 1999 It describes a new approach to the problem of unequal probability sampling The second discussion paper The General Restriction Estimator 2000 deals with the problem of how to find constrained estimators that obey a given set of restrictions imposed on the parameters to be estimated Parts I and II of the volume provide a novel and systematic treatment of sampling theory considered from the angle of the sampling autocorrelation coefficient ρ The same concept plays an important role in the analysis of time series Although this

concept is also well known in sampling theory for instance in cluster sampling and systematic sampling generalizations of p for an arbitrary sampling design are to my knowledge not readily found in the literature

Statistical Decision Theory F. Liese, Klaus-J. Miescke, 2008-12-30 This monograph is written for advanced Master s students Ph D students and researchers in mathematical statistics and decision theory It should be useful not only as a basis for graduate courses seminars Ph D programs and self studies but also as a reference tool At the very least readers should be familiar with basic concepts covered in both advanced undergraduate courses on probability and statistics and introductory graduate level courses on probability theory mathematical statistics and analysis Most statements and proofs appear in a form where standard arguments from measure theory and analysis are sufficient When additional information is necessary technical tools additional measure theoretic facts and advanced probabilistic results are presented in condensed form in an appendix In particular topics from measure theory and from the theory of weak convergence of distributions are treated in detail with reference to modern books on probability theory such as Billingsley 1968 Kallenberg 1997 2002 and Dudley 2002 Building on foundational knowledge this book acquaints readers with the concepts of classical finite sample size decision theory and modern asymptotic decision theory in the sense of LeCam To this end systematic applications to the fields of parameter estimation testing hypotheses and selection of populations are included Some of the problems contain additional information in order to round off the results whereas other problems equipped with solutions have a more technical character The latter play the role of auxiliary results and as such they allow readers to become familiar with the advanced techniques of mathematical statistics
