Engine Emission Control

Technologies G. Amba Prasad Rao, T. Karthikeya Sharma, 2020-06-09 This new volume covers the important issues related to environmental emissions from SI and CI engines as well as their formation and various pollution mitigation techniques. The book addresses aspects of improvements in engine modification such as design modifications for enhanced performance both with conventional fuels as well as with new and alternative fuels. It also explores some new combustion concepts that will help to pave the way for complying with new emission concepts. Alternative fuels are addressed in this volume to help mitigate harmful emissions and alternative power sources for automobiles are also discussed briefly to cover the switch over from fueled engines to electrics including battery powered electric vehicles and fuel cells. The authors explain the different technologies available to date to overcome the limitations of conventional prime movers fueled by both fossil fuels and alternative fuels. Topics examined include Engine modifications needed to limit harmful emissions. The use of engine after treatment devices to contain emissions. The development of new combustion concepts. Adoption of alternative fuels in existing engines. Switching over to electrics advantages and limitations. Specifications of highly marketed automobiles. Emission measurement methods.

Cleaner Cars J. Robert Mondt, 2000-01-28 This book chronicles a 35 year success story the technology that was developed and the progress that was made to achieve the goal of reducing air pollution from automobiles. Air pollution from automobiles as of the year 2000 will have been lowered to levels less than 5% of those for pre control era vehicles writes author J. Robert Mondt who spent over 30 years working on the development of emission control systems for automobiles. Mondt covers both the technological and political aspects of this effort from the early environmental concerns in California to the Clean Air Acts of the 1960s to the introduction of catalytic converters in 1975. He also covers the revised Clean Air Acts of the 1960s to the introduction of catalytic converters in 1975.

Engines and Their Control Donald J. Patterson, Naeim Abdou Henein, 1972 *Engine Emissions* B. P. Pundir, 2007 Engine Emissions Pollutant Formation and Advances in Control Technology provides an up to date reference to academics and professionals on emissions from SI and CI engine powered vehicles. In this text mechanism of formation of engine emissions effect of engine design and operation variables world wide vehicle emission standards and emission measurement and test procedures are presented. Advances in emission control technology that have taken place from those used initially and up to the ones employed on the present day vehicles meeting the stringent emission regulations e.g. Euro 4 ULEV SULEV standards are discussed. Newer developments on exhaust aftertreatment such as HC adsorber systems NO traps and other de NO catalysts and advanced engines like GDI and HCCI engines are covered in the book. *Modern Chemical Technology and Emission Control* M.B. Hocking, 2012-12-06 This text of applied chemistry considers the interface between chemistry and chemical engineering using examples of some of the important processes in industries. Integrated with this is detailed

consideration of measures which may be taken for avoidance or control of potential emissions This new emphasis in applied chemistry has been developed through eight years of experience gained from working in industry in research development and environmental control fields plus twelve years of teaching here using this approach It is aimed primarily towards science and engineering students as well as to environmentalists and practising professionals with responsibilities or an interest in this interface By providing the appropriate process information back to back with emissions and control data the potential for process fine tuning is improved for both raw material efficiency and emission control objectives This approach also emphasizes integral process changes rather than add on units for emission control Add on units have their place when rapid action on an urgent emission problem is required or when control simply is not feasible by process integral changes alone Obviously fundamental process changes for emission containment are best conceived at the design stage However at whatever stage process modifications are installed this approach to control should appeal to the industrialist in particular in that something more substantial than decreased emissions may be gained
