Combustion in Piston Engines A. K. Oppenheim, 2013-03-09 Upon an exponential growth of life on earth supported by a century of oil based energy economy following a century of its coal based phase the world we live in is facing a point of inflection at the threshold of an exponential decay It is in fact the quest for counteracting its dreaded consequences that are bound to follow which half a century ago provided the stimulus for launching the space program Coal and oil are made out of carbon and hydrogen atoms Hydrocarbon molecules consisting of these atoms are the essential ingredients of life by providing energy in a remarkably compact form This property is due to the fact that hydrocarbons by themselves are not highly energetic materials The energy is derived from them by chemical reaction with oxygen supplied by the surrounding air This reaction provides heat and is referred to for that reason as exothermic The mass of oxidizer it requires is in fact 3.5 if it is provided by oxygen alone or 15 if it is supplied by air times larger than that of the hydrocarbon For vehicular transport where the fuel has to be carried on board this feature is of particular significance *Annual Report to Congress on the Automotive Technology Development Program* ,1994 Scientific and Technical Aerospace Reports ,1981 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database Modern Engine Technology Richard Van Basshuysen, Fred Schaefer, 2007-09-28 Part dictionary part encyclopedia Modern Engine Technology from A to Z will serve as your comprehensive reference guide for many years to come Keywords throughout the text are in alphabetical order and highlighted in blue to make them easier to find followed where relevant by subentries extending to as many as four sublevels Full color illustrations provide additional visual explanation to the reader This book features approximately 4 500 keywords with detailed cross references more than 1 700 illustrations some in full color in depth contributions from nearly 100 experts from industry and science engine development both theory and practice *Choice* ,2004 **Electronic Engine Controls** ,2006 **Combustion in Piston Engines** Antoni Oppenheim, 2003 The technology of combustion in piston engines is today at the threshold of a quantum leap comparable to that which took place in electronics at its transition from vacuum tubes to transistors writes author A K Oppenheim Combustion is at the heart of a piston engine playing the key role in generating force to push the piston and produce useful work Combustion in Piston Engines looks at the technology of combustion in piston engines and presents an analytical model of an engine combustion system to promote the development of its electronic control Integrating electronic technology in the process of combustion in piston engines has the potential to yield benefits such as reduced emissions and fuel consumption In particular Combustion in Piston Engines shows how MECC micro electronically controlled combustion can be a significant interim solution to today's challenges until the internal combustion engine is replaced by alternative powerplants Chapters Part 1 Synthesis Chapter 1 Overview Chapter 2 Perspective Chapter 3 Prospective Part 2 Analysis Chapter 4 Diagnosis Chapter 5 Procedure Chapter 6 Prognosis **Who's who in Technology**
