Combustion Diagnostics by Nonintrusive Methods, 1984 **Non-intrusive Combustion Diagnostics** Kenneth K.

Kuo, Timothy P. Parr, 1994 This volume selects over sixty papers presented at this symposium and provides an excellent introduction to the state of the art technology in non intrusive combustion diagnostics for propulsion systems As such it is invaluable for researchers wishing to adopt the methods directly to those interested in assessing the accuracy advantages and limitations of specific techniques and to those seeking a starting point for new ideas toward advances in combustion diagnostics Topics range from LIF and PLIF techniques to diagnostics of particles gaseous reaction systems and solid propellants Also covered are diagnostics in practical combustion systems **Liquid Particle Size Measurement**

Techniques, 2nd Volume E. Dan Hirleman, W. D. Bachalo, Philip G. Felton, 1990 Atomic and Molecular Spectroscopy Sune Svanberg, 2012-12-06 A wide ranging review of modern spectroscopic techniques such as X ray photoelectron optical and laser spectroscopy and radiofrequency and microwave techniques On the fundamental side the book focuses on physical principles and the impact of spectroscopy on our understanding of the building blocks of matter while in the area of applications particular attention is given to those in chemical analysis photochemistry surface characterisation environmental and medical diagnostics remote sensing and astrophysics The Fourth Edition also provides the reader with an update on laser cooling and trapping Bose Einstein condensation ultra fast spectroscopy high power laser matter interaction satellite based astronomy and spectroscopic aspects of laser medicine *Energetic Materials* Ulrich Teipel, 2006-03-06 Incorporation of particular components with specialized properties allows one to tailor the end product s properties For instance the sensitivity burning behavior thermal or mechanical properties or stability of energetic materials can be affected and even controllably varied through incorporation of such ingredients This book examines particle technologies as applied to energetic materials such as propellants and explosives thus filling a void in the literature on this subject Following an introduction covering general features of energetic materials the first section of this book describes methods of manufacturing particulate energetic materials including size reduction crystallization atomization particle formation using supercritical fluids and microencapsulation agglomeration phenomena special considerations in mixing explosive particles and the production of nanoparticles The second section discusses the characterization of particulate materials Techniques and methods such as particle size analysis morphology elucidation and the determination of chemical and thermal properties are presented The wettability of powders and rheological behavior of suspensions and solids are also considered Furthermore methods of determining the performance of particular energetic materials are described Each chapter deals with fundamentals and application possibilities of the various methods presented with particular emphasis on issues applicable to particulate energetic materials The book is thus equally relevant for chemists physicists material scientists

chemical and mechanical engineers and anyone interested or engaged in particle processing and characterization technologies

Liou,1993 Flow Visualization Techniques ,1990 Space Commercialization F. Shahrokhi,Joel S. Greenberg,T. Al-Saud,1990 This volume contains a number of papers presented at the Space Commercialization Symposium The papers cover a broad spectrum of topics including those relating to current and future launch vehicle capability space infrastructure elements space law and space policies They provide insight into both the current and future supply and demand for space related products and services and opportunities and potential problems to be encountered by both the developed and developing nations The papers in this volume expand on five broad topics including launch vehicles advanced propulsion systems operations space power and commercial space and the developing countries The first four topics include papers describing space related capabilities and the last topic includes papers describing commercial opportunities and developing countries experiences and needs

Gun Muzzle Blast and Flash Günter Klingenberg,Joseph M. Heimerl,1992 This book presents for the first time a comprehensive and up to date treatment of gun muzzle blast and flash It describes the gas dynamics involved modern propulsion systems flow development chemical kinetics and reaction networks of flash suppression additives as well as historical work In addition the text presents data to support a revolutionary viewpoint of secondary flash ignition and suppression The book is written for practitioners and novices in the flash suppression field engineers scientists researchers ballisticians propellant designers and those involved in signature detection or suppression

Tactical Missile Warheads Joseph Carleone,1993 By marrying warhead fundamentals with more modern design approaches this book will assist new members of the warhead community to learn more rapidly as well as provide a reference text for those working actively in the field The books chapters are each self contained articles however the topics are linked and may be divided into three groups The first group provides a broad introduction as well as four fundamental technology areas namely explosives dynamic characterization of materials explosive metal interaction physics and hydrocodes The second group presents the mechanics of three major types of warheads shaped charges explosively formed projectiles and fragmentation warheads The interaction with various types of targets is also presented The third group addresses test methodology Flash radiography and high speed photography are covered extensively especially from an applications point of view Special methods are also presented including the use of tomographic reconstruction of flash radiographs and the use of laser interferometry The book is intended for warhead designers as well as engineering managers and project managers who manage warhead munitions and missile development projects
