Combustion in Advanced Gas Turbine Systems I. E. Smith, 2014-05-17 Cranfield International Symposium Series Volume 10 Combustion in Advanced Gas Turbine Systems covers the proceedings of an International Propulsion Symposium held at the College of Aeronautics in Cranfield in April 1967 The book focuses on the processes methodologies reactions and transformations involved in chemical combustion The selection first takes a look at the design considerations in advanced gas turbine combustion chambers combustion in industrial gas turbines and combustion development on the Rolls Royce Spey engine Discussions focus on mechanical condition carbon formation and exhaust smoke system requirements fuel oil ash deposition and corrosion combustion system design performance requirements types of primary zone fuel injection and combustion chamber types The text then examines subsonic flow flameholder studies using a low pressure simulation technique stabilization of hydrogen diffusion flames by flame holders in supersonic flow at low stagnation temperatures and augmentation systems for turbofan engines The book takes a look at a consideration of the possible use of refractory ceramic materials for advanced combustion chamber design cooling of flame tubes by steam injection and combustion problems in the massive steam injection gas turbine The selection is a valuable source of information for researchers interested in the process of combustion in advanced gas turbine systems *Combustion in Advanced Gas Turbine Systems* Ian Edward

Smith, 1968 **Combustion in Advanced Gas Turbine Systems** I. E. Smith, 1968 *Combustion Modeling in Advanced Gas Turbine Systems*, 1995 Goal of DOE's Advanced Turbine Systems program is to develop and commercialize ultra high efficiency environmentally superior cost competitive gas turbine systems for base load applications in utility independent power producer and industrial markets Primary objective of the program here is to develop a comprehensive combustion model for advanced gas turbine combustion systems using natural gas coal gasification or biomass fuels The efforts included code evaluation PCGC 3 coherent anti Stokes Raman spectroscopy laser Doppler anemometry and laser induced fluorescence

Gas Turbines Claire Soares, 2014-10-23 Covering basic theory components installation maintenance manufacturing regulation and industry developments Gas Turbines A Handbook of Air Sea and Land Applications is a broad based introductory reference designed to give you the knowledge needed to succeed in the gas turbine industry land sea and air applications Providing the big picture view that other detailed data focused resources lack this book has a strong focus on the information needed to effectively decision make and plan gas turbine system use for particular applications taking into consideration not only operational requirements but long term life cycle costs in upkeep repair and future use With concise easily digestible overviews of all important theoretical bases and a practical focus throughout Gas Turbines is an ideal handbook for those new to the field or in the early stages of their career as well as more experienced engineers looking for a reliable one stop reference that covers the breadth of the field Covers installation maintenance manufacturer's specifications performance criteria and future trends offering a rounded view of the area that takes in technical detail as well as well as

industry economics and outlook Updated with the latest industry developments including new emission and efficiency regulations and their impact on gas turbine technology Over 300 pages of new revised content including new sections on microturbines non conventional fuel sources for microturbines emissions major developments in aircraft engines use of coal gas and superheated steam and new case histories throughout highlighting component improvements in all systems and sub systems *Energy Conservation Update* ,1981 **Energy Research Abstracts** ,1993 *Proceedings* Ian Edward Smith,1968 Flow and Combustion in Advanced Gas Turbine Combustors Johannes Janicka,AMSINI SADIKI,Michael Schäfer,Christof Heeger,2012-10-29 With regard to both the environmental sustainability and operating efficiency demands modern combustion research has to face two main objectives the optimization of combustion efficiency and the reduction of pollutants This book reports on the combustion research activities carried out within the Collaborative Research Center SFB 568 Flow and Combustion in Future Gas Turbine Combustion Chambers funded by the German Research Foundation DFG This aimed at designing a completely integrated modeling and numerical simulation of the occurring very complex coupled and interacting physico chemical processes such as turbulent heat and mass transport single or multi phase flows phenomena chemical reactions combustion and radiation able to support the development of advanced gas turbine chamber concepts Combustion in Advanced Gas Turbine Systems. R. Norster,2013-10-22 Combustion and Heat Transfer in Gas Turbine Systems is a compilation of papers from the Proceedings of an International Propulsion Symposium held at the College of Aeronautics Cranfield in April 1969 This compilation deals with research done by academic and scientific institutions and of industrial organizations with some research papers covering atomization fuels and high temperature materials One paper describes the combustion system of the Concorde engine used in commercial flights temperature of metal parts and some design modifications to increase the mechanical life of the combustion system Another paper discusses the evolution of the RB 162 combustion system that is used in the vertical takeoff and landing aircrafts The RB 162 has many design features of the earlier single reversal chamber and differs in only one or two points The book then notes the necessity of a plenum chamber burning to further development of supersonic engines and flight One paper also proposes an alternative theory to the traditional ignition theory of altitude relighting such as those developed by Lewis and von Elbe Another paper reposts on some observations made of the atomizing characteristics of air blast atomizers and proposes simple changes to improve the performance of the atomizer by prefilming and allowing air to both sides of the fuel This compilation will prove very helpful for aeronautical engineers aviation designers physicists students of engineering and
