## Contemporary Theory Of Par Diff Equ:

**Basic Modern Theory of Linear Complex Analytic  $q$ -Difference Equations** Jacques Sauloy, 2024-11-06 The roots of the modern theories of differential and  $q$  difference equations go back in part to an article by George D Birkhoff published in 1913 dealing with the three sister theories of differential difference and  $q$  difference equations This book is about  $q$  difference equations and focuses on techniques inspired by differential equations in line with Birkhoff's work as revived over the last three decades It follows the approach of the Ramis school mixing algebraic and analytic methods While it uses some  $q$  calculus and is illustrated by  $q$  special functions these are not its main subjects After a gentle historical introduction with emphasis on mathematics and a thorough study of basic problems such as elementary  $q$  functions elementary  $q$  calculus and low order equations a detailed algebraic and analytic study of scalar equations is followed by the usual process of transforming them into systems and back again The structural algebraic and analytic properties of systems are then described using  $q$  difference modules Newton polygon filtration by the slopes The final chapters deal with Fuchsian and irregular equations and systems including their resolution classification Riemann Hilbert correspondence and Galois theory Nine appendices complete the book and aim to help the reader by providing some fundamental yet not universally taught facts There are 535 exercises of various styles and levels of difficulty The main prerequisites are general algebra and analysis as taught in the first three years of university The book will be of interest to expert and non expert researchers as well as graduate students in mathematics and physics

**Applied Mechanics Reviews**, 1995 *Horace H. Rackham School of Graduate Studies Announcement* Horace H. Rackham School of Graduate Studies, University of Michigan. Dept. of Literature, Science, and the Arts, 1921 *Introduction to the Modern Theory of Dynamical Systems* Anatole Katok, A. B. Katok, Boris Hasselblatt, 1995 This book provided the first self contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with most of the main areas of mathematics The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms The book begins with a discussion of several elementary but fundamental examples These are used to formulate a program for the general study of asymptotic properties and to introduce the principal theoretical concepts and methods The main theme of the second part of the book is the interplay between local analysis near individual orbits and the global complexity of the orbit structure The third and fourth parts develop the theories of low dimensional dynamical systems and hyperbolic dynamical systems in depth Over 400 systematic exercises are included in the text The book is aimed at students and researchers in mathematics at all levels from advanced undergraduate up
