Contemporary Topics In Immunobiology:

Contemporary Topics in Immunobiology Noel L. Warner, 2012-12-06 Although the field of contemporary immunobiology continues to diversify and encompass an increasing array of biomedical disciplines and topics there are frequently several themes that will receive special emphasis and prominence at any given time It is our hope that this series will reflect these themes and provide an appropriate venue for exposure of such topics at a useful time Although this particular volume is not designated as one of the special topics volumes in this series the selected topics have in essence come together to consider aspects of two major areas of considerable research interest in immunobiology today These concern new approaches and insights into an understanding of the tumor host relationship and aspects of cellular interactions and networks as approached by various different lines of investigation The province of tumor immunology remains one of the most challenging areas to immunologists as it of necessity involves not only developing an understanding of the neoplastic process itself and how the immune system responds but of eventually using this information in a diagnostic or therapeutic manner *Contemporary Topics in Immunobiology, V.8* Noel Lawrence Warner, Max D. Cooper, 1978

Contemporary Topics in Immunobiology William Weigle, 1976-08-01 *Contemporary topics in immunobiology. 7. T cells* Osias Stutman, 1977 *Contemporary Topics in Immunobiology* Michael G. Hanna, 1972 **Contemporary Topics in Immunobiology, Vol. 7: T Cells** Osias Stutman, 2012-12-06 And even I can remember A day when historians left blanks in their writings I mean for things they didn't know Ezra Pound Canto XIII The prefaces to the previous volumes of this series have all expressed in various ways the actual motivation behind these collective efforts There was agreement in most instances that we are facing some kind of publication explosion and that the present type of compact and personalized reviews may be of help from both a conceptual and a purely informational standpoint The aims of the series were and still are to focus attention on the rapidly changing fields within the realm of immunology and to present in each chapter the summation of results generated by an investigator or group of Investigators either as an analysis of their own work or as a correlation of such work with the general field in question The present volume does not differ in its construction from its predecessors although it does concentrate on a single target the T lymphocyte and its biology The selection of subjects as well as contributors has been the sole responsibility of this editor however the actual format and length of the individual contributions was left to the discretion and inspiration of the different authors Even the styles ranging from the concise statement to the meticulously detailed review attest to the freedom of format *Contemporary Topics in Immunobiology* Max Cooper, 2012-12-06 Contemporary immunobiology is an ever diversifying field that embraces many aspects of cellular and humoral immune responsiveness This includes the phylogeny ontogeny induction regulation expression and differentiation of the immune cell series as well as the relationship of these to the pathogenesis of many disease processes It is clearly beyond the limitations of each volume in this series to comprehensively cover progress in each of these fields Three

general areas of contemporary investigations are discussed in the current issue cellular events of B cell differentiation including antigen recognition and responsiveness of B lymphocytes regulation of the immune response by T cells and the roles of this regulatory system in allotype suppression and in autoimmunity and the genetic control of immune responses and its possible relation to disease pathogenesis Analysis of responsiveness of B lymphocytes has been greatly aided by the availability of athymic nude mice The immunological responsiveness of these mice to a wide range of stimuli has been reviewed and analyzed by H H Wortis This article concludes with the provocative thesis that in the future nudes will supply new rather than confirmatory data especially regarding the development of neoplasia In contrast to the studies on the congenitally athymic mice G F

Warner, 2012-12-06 In this current volume of *Contemporary Topics in Immunobiology* we have chosen to continue with the multiple theme approach that was developed in Volumes 1, 3 and 5 of this series Immunobiology still shows little sign of decreasing its active growth rate but rather is continuing to broaden its range of interests and applications particularly as new techniques and methods are adapted from other fields of medical research This present volume reflects both several of the more classical areas of immunology now addressed in the light of contemporary immunology and several newer directions that have been taken in other fields The general subject of T cell heterogeneity and functions of T cell subpopulations is addressed in Chapters 1 and 2 The potential role of genes of the major histocompatibility complex in controlling the immune functions of T lymphocytes still remains a major unresolved issue in immunogenetics and the current status of this problem is excellently reviewed by J F A P Miller The further elucidation of functional subpopulations of human T lymphocytes has been particularly hampered by the lack of available markers for characterizing and isolating such subpopulations A major step in this direction has been made by L Moretta M Ferrarini and M D Cooper who review their experience with Fc receptor bearing human T lymphocyte populations

O. Weigle, 1976 **Contemporary Topics in Immunobiology** Edwin Cooper, 2012-03-26 This fourth volume of *Contemporary Topics in Immunobiology* treats in vertebrate immunity Specifically the results represent several approaches to humoral and cellular immunity It is evident that invertebrates do have functioning immune systems For example cellular immunity is characterized by both specificity and memory but it is still problematical whether vertebrate immune capacity evolved directly from invertebrates Most of the manuscripts were formally presented at the International Symposium on Invertebrate Pathology University of Minnesota August 1972 held in connection with the 25th anniversary celebration of the American Institute of Biological Sciences I wish to express my appreciation to the contributors and to beg their indulgence in what may have been overzealous editing This was done though in the interest of clarity and to seek uniformity Because of earlier problems time limitations did not permit consultations between submission of manuscripts and final editing For

assistance I extend a special note of gratitude to Mrs Lois Gehringer who unselfishly retyped many of the manuscripts The preparation of this volume was aided partially by NSF Grant GB17767 two grants from The California Institute for Cancer Research and a grant from The Brown Hazen Corporation E L C Contents Introduction General Comments and a Note on Taxonomy **Contemporary Topics in Immunobiology** Noel L. Immunobiology A. Davies,2012-12-06 This second volume of Contemporary Topics in Immunobiology considers many aspects of thymus dependency in order to exemplify the role of the thymus in different species and different immunological responses It is not intended to be a compendium of the responses which have been shown to be thymus dependent but rather to illustrate for the reader the criteria he should apply in thinking about the significance of the thymus in immune responses We are grateful to the editors and publishers of the Annals of the New York Academy of Science the Australian Journal of Experimental Biology and Medical Science Clinical and Experimental Immunology Immunology the Journal of Experimental Medicine the Journal of Immunology Laboratory Investigation Nature and the Proceedings of the Royal Society of Medicine and to Springer Verlag Berlin for permission to reproduce illustrations Specific references are given in the text We would also like to thank the contributors for their time and energy and willingness to submit to the editorial red pencils The exercise of these censorious instruments meant that the manuscripts had to be reorganized and retyped Mrs J Pettis Mrs A Inglefield and Miss M Butt all helped and we are most grateful to them A J S D R L e **Contemporary Topics in Immunobiology** ,1972 *Contemporary Topics in Molecular Immunology* Gordon Ada,1974-09-01 A series of volumes devoted to molecular immunology will contain for the most part articles which attempt to explain immunological phenomena in terms of the behavior and properties of particular molecules Many of the articles in this volume do this At the same time there are many instances and this is particularly so in the case of immunology where phenomena must first be described and interpreted in terms of the properties and behavior of cells Most of us would hope that in due course a fuller understanding will be forthcoming This volume starts off with such a contribution Perhaps the most fascinating problem in immunology is how diversity is generated There are two broad proposals 1 that complete information exists ab initio the germ line theory and 2 that there is initially a limited amount of information and diversity is generated by somatic mutation The issue is unresolved but Cunningham has taken many of the data which have previously been used to support the germ line theory and shows that the interpretations are not always clear cut and can frequently be used to support another possibility that new specificities may arise after stimulation of appropriate cells by antigens And he has produced experimental evidence to support this notion On the other hand there can be little doubt that to a considerable degree the specificity of the immune response is determined by the selection by antigen of cells with receptors of appropriate specificity This is essentially a surface phenomenon Contemporary Topics in Molecular Immunology R. Porter,2013-03-09 The distinction between molecular immunology and immunobiology is necessarily arbitrary The most rapid progress is usually made in the blurred

area between the two when the chemist is aware of the full significance of the biological problems and the biologist is alert to the contribution that a knowledge of molecular structure can be made to their solution. The range of scientific disciplines able to contribute to research in immunology which this approach brings is reflected in the present volume. Protein chemists worked out the arrangement of the polypeptide chains and the amino acid sequences of antibodies and X-ray crystallographers the three dimensional structure but more precise definition of the amino acid side chain positions in the combining site is required for an understanding of the subtleties of antibody specificity. That this can be achieved with physical techniques such as nuclear magnetic resonance has been shown by R A Dwek and in his chapter he summarizes these results with a minimum of technical detail. The immune response has been shown to be dependent on complex cellular interactions and further progress will be facilitated by investigation of the molecular basis of these interactions. This necessitates study of the structure and organization of the molecules in the surfaces of lymphocytes and other cells.

Contemporary Topics in Immunobiology John J. Marchalonis, 2012-12-06 The problem that virtually all cells have in discriminating between self and non self molecules and cells has been considered at great length in immunobiology. However cells that clearly are incapable of carrying out mammalian type immune functions can exhibit exquisite specificity in their capacity to discriminate among syngeneic, allogeneic and xenogeneic cells. In this volume of *Contemporary Topics in Immunobiology* we have chosen to consider the general problem of self non self discrimination as it is manifest in recognition reactions of plants and invertebrates and in the evolutionary development of the immune response of vertebrates. A broad many faceted approach is taken toward fundamental issues in immunobiology in order to develop innovative concepts of receptor function as well as to delineate traditional views. The capacity of plants to discriminate between self and non self is addressed in Chapter 1 by R B Knox and Adrienne E Clarke. These authors provide examples of cell cell recognition in plants that parallel those occurring in invertebrates and vertebrates. In general tolerance acceptance of grafts is restricted to plants within closely related genera. Recognition is mediated by callus cells which proliferate at wound surfaces in higher plants and there is a correlation between cell and tissue type and antigenic markers detectable with the use of mammalian antibodies. Certain flowering plants exhibit precise discrimination in fertilization when pollen must be from the same species but fertilization occurs only if the pollen is genetically non self.

Contemporary Topics in Immunobiology M. Hanna, 2012-12-06 Investigators, teachers and practitioners in the biomedical sciences are keenly aware of the current crisis in scientific communications. With well over a thousand biomedical journals producing new issues each month and with approximately five hundred new technical books in biomedicine being published each year not to mention the proliferation of information exchange meetings it is all too clear that we are in danger of being inundated by a flood of tables, figures and hypotheses. The problem is particularly acute in immunology as the rate of information production is increasing geometrically and immunological approaches have been extended into other biological

and medical fields to further diversify the research over a vast literature Abstracting and information retrieval services do much to improve the investigator's lot but do not offer solutions for one particularly distressing aspect of the crisis In the midst of our informational overabundance one often finds that interrelationships between an investigator's collective findings are becoming blurred or that the relation of his total work to the field are not clear Although review articles are indispensable in fixing the status of a given problem they do not provide the detailed attention to a single author's work that is needed
