The American Synthetic Rubber Research Program Peter J. T. Morris, 2017-01-30 This history of the government funded synthetic rubber research program 1942 1956 offers a rare analysis of a cooperative research program geared to the improvement of existing products and the creation of new ones The founders of the program believed the best way to further research in the new field was through collaboration among corporations universities and the federal government Morris concludes that in fact the effort was ultimately a failure and that vigorous competition proves the best way to stimulate innovation Government programs like the rubber research program are far better at improving existing products the author contends than creating wholly new ones

Advances in New Materials J. Riffle, J.C. Salamone, 2012-12-06 of Polymer Chemistry Inc of the American Chemical Society held its The Division 15th Biennial Polymer Symposium on the topic Advances in New Materials November 17 21 1990 at the Pier 66 Resort and Marina in Ft Lauderdale Florida A three and one half day program was presented by recognized leaders in major areas of new polymeric materials The topics of the Biennial Symposium included new high performance polymers polymers for electronic applications electrically conducting polymers nonlinear optics new polymer systems and polymers derived from biological media These are the subject areas of this volume of Contemporary Topics in Polymer Science The intent of the Symposium was to focus on recent advances in polymeric materials The technical sessions were complemented by an initial poster session which augmented the various technical sessions A particular highlight of the meeting was the presentation to Professor Michael Szwarc of the 1990 Division of Polymer Chemistry Award by Dr J L Benham Chairman of the T Aymer Division During his Award address Professor Szwarc described how he had become a polymer chemist and later developed living polymers Without a doubt Professor Szwarc has made a profound contribution to the polymer field which has yielded many new forms of living polymerization

Chemical Sciences in the 20th Century Carsten Reinhardt, 2008-09-26 Chemistry in the last century was characterized by spectacular growth and advances stimulated by revolutionary theories and experimental breakthroughs Yet despite this rapid development the history of this scientific discipline has achieved only recently the status necessary to understand the effects of chemistry on the scientific and technological culture of the modern world This book addresses the bridging of boundaries between chemistry and the other classical disciplines of science physics and biology as well as the connections of chemistry to mathematics and technology Chemical research is represented as an interconnected patchwork of scientific specialties and this is shown by a mixture of case studies and broader overviews on the history of organic chemistry theoretical chemistry nuclear and cosmochemistry solid state chemistry and biotechnology All of these fields were at the center of the development of twentieth century chemistry and the authors cover crucial topics such as the emergence of new subdisciplines and research fields the science technology relationship and national styles of scientific work This monograph represents a unique treasure trove for general historians and historians of science while also appealing to those interested in the theoretical
