Continuous Media Databases Aidong Zhang, Avi Silberschatz, Sharad Mehrotra, 2012-12-06 Continuous Media Databases brings together in one place important contributions and up to date research results in this fast moving area Continuous Media Databases serves as an excellent reference providing insight into some of the most challenging research issues in the field

Database Systems For Advanced Applications '95 - Proceedings Of The Fourth International Conference Wang Ling Tok, Yoshifumi Masunaga, 1995-03-31 This volume contains three keynote papers and 51 technical papers from contributors around the world on topics in the research and development of database systems such as Data Modelling Object Oriented Databases Active Databases Data Mining Heterogeneous Databases Distributed Databases Parallel Query Processing Multi Media Databases Transaction Management Systems Document Databases Temporal Databases Deductive Databases User Interface and Advanced Database Applications

Multimedia Database Systems V.S. Subrahmanian, Sushil Jajodia, 2012-12-06 With the rapid growth in the use of computers to manipulate process and reason about multimedia data the problem of how to store and retrieve such data is becoming increasingly important Thus although the field of multimedia database systems is only about 5 years old it is rapidly becoming a focus for much excitement and research effort Multimedia database systems are intended to provide unified frameworks for requesting and integrating information in a wide variety of formats such as audio and video data document data and image data Such data often have special storage requirements that are closely coupled to the various kinds of devices that are used for recording and presenting the data and for each form of data there are often multiple representations and multiple standards all of which make the database integration task quite complex Some of the problems include what a multimedia database query means what kinds of languages to use for posing queries how to develop compilers for such languages how to develop indexing structures for storing media on ancillary devices data compression techniques how to present and author presentations based on user queries Although approaches are being developed for a number of these problems they have often been ad hoc in nature and there is a need to provide a principled theoretical foundation

Nontraditional Database Systems Yahiko Kambayashi, Katsumi Tanaka, Masaru Kitsuregawa, Akifumi Makinouchi, Shunsuke Uemura, Yoshifumi Masunaga, 2003-09-02 Nontraditional Database Systems is the fifth volume in the Advanced Information Processing Technology series It brings together the results of research carried out by the Japanese database research community in the field of nontraditional database systems The book examines nontraditional types of applications data types systems and environments together with high performance architecture to support nontraditional applications such as web mining data engineering and object processing

Multimedia Information Storage and Management Soon M. Chung, 1996-08-31 Multimedia information systems are quite different from traditional information systems especially in data types modeling delivery and user interface The large size of multimedia data and the high bandwidth requirement of multimedia streams

require new storage buffering delivery and networking schemes The presentational nature of multimedia applications requires a proper synchronization between multimedia streams and the composition of multimedia documents in the distributed environment should overcome the heterogeneity of underlying systems This book is edited for undergraduate and graduate students studying multimedia information and applications researchers and developers of various multimedia software and hardware systems multimedia tool developers user interface designers and network protocol designers by including 17 chapters focused on the following major issues Disk scheduling and storage hierarchy Configuration of multimedia servers and buffer management Delivery scheduling for multimedia streams Supporting user interactions Document modeling and temporal modeling of multimedia data Integrated multimedia information system **Special Issue: Continuous Media Databases** Aidong Zhang,2000 **Multimedia Database Management Systems B.**

Prabhakaran,2012-12-06 Multimedia Database Management Systems presents the issues and the techniques used in building multimedia database management systems Chapter 1 provides an overview of multimedia databases and underlines the new requirements for these applications Chapter 2 discusses the techniques used for storing and retrieving multimedia objects Chapter 3 presents the techniques used for generating metadata for various media objects Chapter 4 examines the mechanisms used for storing the index information needed for accessing different media objects Chapter 5 analyzes the approaches for modeling media objects both their temporal and spatial characteristics Object oriented approach with some additional features has been widely used to model multimedia information The book discusses two systems that use object oriented models OVID Object Video Information Database and Jasmine The models for representing temporal and spatial requirements of media objects are then studied The book also describes authoring techniques used for specifying temporal and spatial characteristics of multimedia databases Chapter 6 explains different types of multimedia queries the methodologies for processing them and the language features for describing them The features offered by query languages such as SQL MM Structured Query Language for Multimedia PICQUERY and Video SQL are also studied Chapter 7 deals with the communication requirements for multimedia databases A client accessing multimedia data over computer networks needs to identify a schedule for retrieving various media objects composing the database The book identifies possible ways for generating a retrieval schedule Chapter 8 ties together the techniques discussed in the previous chapters by providing a simple architecture of a distributed multimedia database management system Multimedia Database Management Systems can be used as a text for graduate students and researchers working in the area of multimedia databases In addition the book serves as essential reading material for computer professionals who are in or moving to the area of multimedia databases

Multimedia Database in Perspective Peter M.G. Apers,Henk M. Blanken,Maurice A.W. Houtsma,2012-12-06 During the last decade multimedia has emerged as a major research and development area Pushed by advanced technology like huge capacity storage devices fast networks and powerful work stations new applications have arisen Many definitions of

multimedia systems exist one of them being computer systems that support interactive use of at least one of the following information sources graphics image voice sound and video These systems have caused a boom in the world of entertainment but also in other business areas great opportunities for novel products and services are available The size of multimedia data is often huge and the storage of huge amounts of data is a task normally allocated to database management systems Although some modern database management systems offer facilities to support development of multimedia applications many problems related to multimedia support are still not well understood This book reports on research efforts to solve some of these problems An introductory knowledge of databases and also of operating systems and network technology is assumed The book is very suitable as material for courses at senior or graduate level but also for upgrading the skills of computer scientists working on database management systems multimedia systems or applications The book consists of four parts Part I is called Requirements for a Multimedia Database and comprises chapters one to three Chapter one presents an outline of the book

Multimedia Databases Lynne Dunckley, 2003 This book brings together coverage of SQL multimedia metadata image processing computer vision networks and database management It provides an understanding of multimedia data and database technology and explains why advances in both have come together to create the field of multimedia databases Exercises and solutions are included Dunckley teaches information technology at Thames Valley University Annotation c 2003 Book News Inc Portland OR booknews.com *Proceedings of the ... Query Scheduling and Optimization in Parallel and Multimedia Databases Minos N. Garofalakis, 1998 1999 International Symposium on Database Applications in Non-Traditional Environments (DANTE '99) Y. Kambayashi, Hiroki Takakura, 2000 Annotation This collection of 60 papers presented at the November 1999 symposium provides research results on non traditional databases such as Internet related technologies handling of various kinds of data supporting technologies for virtual organization data models system technologies and applications Topics include temporal issues in data warehouse systems a semantic caching method based on linear constraints multimedia document support inside the AHYDS platform interacting with topological invariants of spatial databases spatio temporal levels of detail LoD for browsing video databases and similarity retrieval of human motion as multi stream time series data No subject index Annotation copyrighted by Book News Inc Portland OR *Proceedings*, 1994

Distributed Multimedia Databases Timothy K. Shih, 2002 In the last few years we have observed an explosive growth of multimedia computing communication and applications This revolution is transforming the way people live work and interact with each other and is impacting the way business government services education entertainment and healthcare are operating Yet several issues related to modeling specification analysis and design of distributed multimedia database systems and multimedia information retrieval are still challenging to both researchers and practitioners Distributed Multimedia Databases Techniques and Applications points out these challenges and provides

valuable suggestions toward the necessary solutions by focusing on multimedia database techniques

Database System Concepts Abraham Silberschatz, Henry F. Korth, S. Sudarshan, 1999 *Principles of Multimedia Database Systems* V. S. Subrahmanian, 1998

Until recently databases contained easily indexed numbers and text Today in the age of powerful graphically based computers and the world wide web databases are likely to contain a much greater variety of data forms including images sound video clips and even handwritten documents When multimedia databases are the norm traditional methods of working with databases no longer apply How do you query a video library or an image database containing x rays or sounds in an audio database *Principles of Multimedia Database Systems* explains how to work with these new multimedia data forms It is the first comprehensive treatment of the skills and techniques required to build maintain and query multimedia databases This book presents the mix of techniques necessary for working with multimedia databases including synthetic solutions for the design and deployment of multimedia database systems Because rapid technological developments are constantly changing the landscape of multimedia databases the book teaches basic theoretical principles applicable to any database Covers the major issues of multimedia database design with a strong focus on distributed multimedia databases Discusses important topics including how to organize the vast data types storage and retrieval and creation and delivery of multimedia presentations Organized around the lively scenario of a crime fighting database that evolves as new concepts are introduced Includes numerous exercises and suggestions for programming projects Additional materials on the web include updates on line supplements and links to downloadable software

Storage and Retrieval for Image and Video Databases, 1995 **A Persistent Programming Language for Multimedia Databases in the OPERA Project** Z. Wu, Ken Moody, Jean Bacon, 1993 **Multimedia Database Management Systems** Guojun Lu, 1999

Traditional database management systems can't handle the demands of managing multimedia data with the rapid growth of multimedia platforms and the world wide web database management systems must now process store index and retrieve alphanumeric data bitmapped and vector based graphics and video and audio clips both compressed and uncompressed The comprehensive systematic approach of *Multimedia Database Management Systems* presents you with current and emerging methods for managing the increasing demands of multimedia databases and their inherent design and architecture issues
