

TENSOR PRODUCTS OF $C(X)$ -ALGEBRAS OVER $C(X)$

VREJ ZARIKIAN

ABSTRACT: Let X be a compact Hausdorff space and $C(X)$ be the continuous complex-valued functions on X . A $C(X)$ -algebra is a unital C^* -algebra \mathcal{A} such that $C(X) \subseteq Z(\mathcal{A})$ (the center of \mathcal{A}). Given two $C(X)$ -algebras \mathcal{A} and \mathcal{B} , Blanchard shows that under certain conditions, the algebraic tensor product $\mathcal{A} \otimes_{C(X)} \mathcal{B}$ of \mathcal{A} and \mathcal{B} over $C(X)$ admits both a minimal C^* -norm and a maximal C^* -norm. In particular, this is true when X is hyperstonean, by a result of Giordano and Mingo.

In this talk, based on joint work with David Pitts, we survey the aforementioned theory and then use it to prove the following structural result for W^* -inclusions:

If \mathcal{M} is a W^ -algebra and $\mathcal{D} \subseteq \mathcal{M}$ is W^* -subalgebra, and if $(\mathcal{M}, \mathcal{D})$ admits a unique pseudo-expectation, then $\mathcal{D}' = Z(\mathcal{D})$, where $\mathcal{D}' = \mathcal{D}' \cap \mathcal{M}$ is the relative commutant of \mathcal{D} in \mathcal{M} .*

A key step in the proof is establishing that restriction is a bijection between the conditional expectations $C^*(\mathcal{D}, \mathcal{D}') \rightarrow \mathcal{D}$ and the conditional expectations $\mathcal{D}' \rightarrow Z(\mathcal{D})$.

Continuous Tensor Products and Arveson's Spectral C^* -Algebras Joachim Zacharias, 2000 This book is intended for graduate students and research mathematicians interested in operator algebras *Noncommutative Dynamics and E-Semigroups* William Arveson, 2012-11-06 These days the term Noncommutative Dynamics has several interpretations It is used in this book to refer to a set of phenomena associated with the dynamical evolution of quantum systems of the simplest kind that involve rigorous mathematical structures associated with infinitely many degrees of freedom The dynamics of such a system is represented by a one parameter group of automorphisms of a non commutative algebra of observables and we focus primarily on the most concrete case in which that algebra consists of all bounded operators on a Hilbert space If one introduces a natural causal structure into such a dynamical system then a pair of one parameter semigroups of endomorphisms emerges and it is useful to think of this pair as representing the past and future with respect to the given causality These are both Eo semigroups and to a great extent the problem of understanding such causal dynamical systems reduces to the problem of understanding Eo semigroups The nature of these connections is discussed at length in Chapter 1 The rest of the book elaborates on what the author sees as the important aspects of what has been learned about Eo semigroups during the past fifteen years Parts of the subject have evolved into a satisfactory theory with effective toolsj other parts remain quite mysterious Like von Neumann algebras Eo semigroups divide naturally into three types 1 11 111

Splitting Theorems for Certain Equivariant Spectra L. Gaunce Lewis, 2000 This book is intended for graduate students and research mathematicians interested in algebraic topology Advances in Quantum Dynamics Geoffrey L. Price, 2003 This volume contains the proceedings of the conference on Advances in Quantum Dynamics The purpose of the conference was to assess the current state of knowledge and to outline future research directions of quantum dynamical semigroups on von Neumann algebras Since the appearance of the landmark papers by F Murray and J von Neumann On the Rings of Operators von Neumann algebras have been used as a mathematical model in the study of time evolution of quantum mechanical systems Following the work of M H Stone von Neumann and others on the structure of one parameter groups of unitary transformations many researchers have made fundamental contributions to the understanding of time reversible dynamical systems This book deals with the mathematics of time irreversible systems also called dissipative systems The time parameter is the half line and the transformations are now endomorphisms as opposed to automorphisms For over a decade W B Arveson and R T Powers have pioneered the effort to understand the structure of irreversible quantum dynamical systems on von Neumann algebras Their papers in this volume serve as an excellent introduction to the theory Also included are contributions in other areas which have had an impact on the theory such as Brownian motion dilation theory quantum probability and free probability The volume is suitable for graduate students and research mathematicians interested in the dynamics of quantum systems and corresponding topics in the theory of operator algebras

Operator Theory And Analysis Of Infinite Networks Palle Jorgensen, Erin P J Pearse, 2023-03-21 This volume considers resistance networks large graphs which are connected undirected and weighted Such networks provide a discrete model for physical processes in inhomogeneous media including heat flow through perforated or porous media These graphs also arise in data science e g considering geometrizations of datasets statistical inference or the propagation of memes through social networks Indeed network analysis plays a crucial role in many other areas of data science and engineering In these models the weights on the edges may be understood as conductances or as a measure of similarity Resistance networks also arise in probability as they correspond to a broad class of Markov chains The present volume takes the nonstandard approach of analyzing resistance networks from the point of view of Hilbert space theory where the inner product is defined in terms of Dirichlet energy The resulting viewpoint emphasizes orthogonality over convexity and provides new insights into the connections between harmonic functions operators and boundary theory Novel applications to mathematical physics are given especially in regard to the question of self adjointness of unbounded operators New topics are covered in a host of areas accessible to multiple audiences at both beginning and more advanced levels This is accomplished by directly linking diverse applied questions to such key areas of mathematics as functional analysis operator theory harmonic analysis optimization approximation theory and probability theory
