## **Continuous Geometries With A Transition:**

**Continuous Geometries with a Transition Probability** John Von Neumann, 1981      *Continuous Geometries with a Transition Probability* J. von Neumann, I. Halperin, 1981      **Selected Papers on Algebra and Topology by Garrett Birkhoff** J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallée Poussin's beautiful *Cours d'Analyse Infinitésimale* Hausdorff's *Grundzüge der Mengenlehre* and Fréchet's *Espaces Abstraits* In addition I discovered Carathéodory's 1912 paper *Über das lineare Mass von Punktmengen* and Hausdorff's 1919 paper on *Dimension und Ausseres Mass* and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV      **The Complete Dimension Theory of Partially Ordered Systems with Equivalence and Orthogonality** K. **Logic** Enrico G. Beltrametti, Bas C. van Fraassen, 2012-12-06 These are the proceedings of the Workshop on Quantum Logic held in Erice Sicily December 2-9 1979 at the Ettore Majorana Centre for Scientific Culture A conference of this sort was originally proposed by Giuliano Toraldo di Francia who suggested the idea to Antonino Zichichi and thus laid the foundation for the Workshop To both of them we express our appreciation and thanks also on behalf of the other participants for having made this conference possible There were approximately fifty participants their names and institutions are listed in the text Quantum logic which has now a history of some forty or more years has seen remarkable growth during the sixties and seventies The papers in the present volume presuppose by and large some acquaintance with the elements of the subject These may be found in the well known books by J H Jauch Foundations of Quantum Mechanics Reading 1968 V S Varadarajan Geometry of Quantum Theory Princeton 1968 and C Piron Foundations of Quantum Theory New York 1976 The initial program for the conference listed about twenty five invited papers But in the context of a very active and qualified attendance other contributions were offered This volume contains all of them The program listed six main topics I Classification of different areas of quantum logic and open problems II Comparison and unification of different approaches to quantum theories problems of interpretation III Formal quantum logic axiomatics IV Modal interpretations of quantum logic v FOREWORD V Quantum set theory
