William Helton, Raúl Quiroga-Barranco, Nikolai Vasilevski, 2012-02-24 This volume contains twenty one solicited articles by speakers at the IWOTA 2009 workshop ranging from expository surveys to original research papers each carefully refereed The contributions reflect recent developments in operator theory and its applications Consistent with the topics of recent IWOTA meetings IWOTA 2009 was designed as a comprehensive inclusive conference covering all aspects of theoretical and applied operator theory ranging from classical analysis differential and integral equations complex and harmonic analysis to mathematical physics mathematical systems and control theory signal processing and numerical analysis The conference brought together international experts for a week long stay at Hotel Real de Minas in an atmosphere conducive to fruitful professional interactions These Proceedings reflect the high quality of the papers presented at the conference Abstract Band Method via Factorization, Positive and Band Extensions of Multivariable Almost Periodic Matrix Functions, and Spectral Estimation L. Rodman, Ilya M. Spitkovskii, Hugo Jan Woerdeman, 2002 In this work versions of an abstract scheme are developed which are designed to provide a framework for solving a variety of extension problems The abstract scheme is commonly known as the band method The main feature of the new versions is that they express directly the conditions for existence of positive band extensions in terms of abstract factorizations with certain additional properties The results prove amongst other things that the band extension is continuous in an appropriate sense The Theory of **H(b) Spaces: Volume 2** Emmanuel Fricain, Javad Mashreghi, 2016-10-20 An H b space is defined as a collection of analytic functions that are in the image of an operator The theory of H b spaces bridges two classical subjects complex analysis and operator theory which makes it both appealing and demanding Volume 1 of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of H b spaces such as Hardy spaces Fourier analysis integral representation theorems Carleson measures Toeplitz and Hankel operators various types of shift operators and Clark measures Volume 2 focuses on the central theory Both books are accessible to graduate students as well as researchers each volume contains numerous exercises and hints and figures are included throughout to illustrate the theory Together these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics

Operator Theory, Functional Analysis and Applications M. Amélia Bastos, Luís Castro, Alexei Yu.

Karlovich,2021-03-31 This book presents 30 articles on the topic areas discussed at the 30th International Workshop on Operator Theory and its Applications held in Lisbon in July 2019 The contributions include both expository essays and original research papers reflecting recent advances in the traditional IWOTA areas and emerging adjacent fields as well as the applications of Operator Theory and Functional Analysis The topics range from C algebras and Banach algebras Sturm Liouville theory integrable systems dilation theory frame theory Toeplitz Hankel and singular integral operators to questions from lattice group and matrix theories complex analysis harmonic analysis and function spaces Given its scope the book is chiefly intended for researchers and graduate students in the areas of Operator Theory Functional Analysis their applications and adjacent fields

The Theory of H (b) Spaces Emmanuel Fricain, Javad Mashreghi, 2016-10-20 In two volumes this comprehensive treatment covers all that is needed to understand and appreciate this beautiful branch of mathematics

One-dimensional Functional Equations Genrich Belitskii, Vadim Tkachenko, 2012-12-06 The monograph is devoted to the study of functional equations with the transformed argument on the real line and on the unit circle Such equations systematically arise in dynamical systems differential equations probabilities singularities of smooth mappings and other areas The purpose of the book is to present modern methods and new results in the subject with an emphasis on a connection between local and global solvability The general concepts developed in the book are applicable to multidimensional functional equations Some of the methods are presented for the first time in the monograph literature The book is addressed to graduates and researchers interested in dynamical systems differential equations operator theory or the theory of functions and their applications Orthogonal Systems and Convolution Operators Robert Ellis, Israel Gohberg, 2003 The main concern of this book is the distribution of zeros of polynomials that are orthogonal on the unit circle with respect to an indefinite weighted scalar or inner product The first theorem of this type proved by M G Krein was a far reaching generalization of G Szeg s result for the positive definite case A continuous analogue of that theorem was proved by Krein and H Langer These results as well as many generalizations and extensions are thoroughly treated in this book A unifying theme is the general problem of orthogonalization with invertible squares in modules over C algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz marices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis Convolution Operators and Factorization of Almost Periodic Matrix Functions Albrecht Böttcher, Yuri I. Karlovich, Ilya M. Spitkovsky, 2012-12-06 Many problems of the engineering sciences physics and mathematics lead to convolution equations and their various modifications Convolution equations on a half line can be studied by having recourse to the methods and results of the theory of Toeplitz and Wiener Hopf operators Convolutions by integrable kernels have continuous symbols and the Cauchy singular integral

operator is the most prominent example of a convolution operator with a piecewise continuous symbol The Fredholm theory of Toeplitz and Wiener Hopf operators with continuous and piecewise continuous matrix symbols is well presented in a series of classical and recent monographs Symbols beyond piecewise continuous symbols have discontinuities of oscillating type Such symbols emerge very naturally For example difference operators are nothing but convolution operators with almost periodic symbols the operator defined by A Achievements and Challenges in the Field of Convolution Operators Albrecht Böttcher, Oleksiy Karlovych, Eugene Shargorodsky, Ilya M. Spitkovsky, 2025-03-13 This volume which is dedicated to Yuri Karlovich on the occasion of his 75th birthday includes biographical material personal reminiscences and carefully selected papers The contributions constituting the core of this volume are written by mathematicians who have collaborated with Yuri or have been influenced by his vast mathematical work They are devoted to topics of Yuri Karlovich's work for five decades starting with his work on singular integral operators with shift then broadened to include Toeplitz Wiener Hopf Fourier and Mellin convolution and pseudodifferential operators factorisation of almost periodic matrix functions and local trajectory methods for the study of algebras of convolution and singular integral operators Contributions to Operator Theory and Its **Operator Theory, Analysis and the State Space** Applications Israel Gohberg, J.
