The Extended Field of Operator Theory Michael A. Dritschel, 2007-06-25 This volume contains contributions originating from the International Workshop on Operator Theory and Its Applications IWOTA held in Newcastle upon Tyne in July 2004

The articles expertly cover a broad range of material at the cutting edge of functional analysis and its applications. The works are written by world authorities in their specialities. Operator Algebras and Mathematical Physics Tirthankar

Bhattacharyya, Michael A. Dritschel, 2015-09-29 This volume gathers contributions from the International Workshop on Operator Theory and Its Applications IWOTA held in Bangalore India in December 2013. All articles were written by experts and cover a broad range of original material at the cutting edge of operator theory and its applications. Topics include multivariable operator theory, operator theory on indefinite metric spaces, Krein and Pontryagin spaces and its applications, spectral theory with applications to differential operators, the geometry of Banach spaces, scattering and time varying linear systems and wavelets and coherent states. *Contributions to Operator Theory in Spaces with an Indefinite Metric* Aad Dijkema, Israel Gohberg, Marinus A. Kaashoek, Reinhard Mennicken, 2012-12-06 This volume is dedicated to Heinz Langer, a leading expert in spectral analysis and its applications, in particular to operators in spaces with an indefinite metric, on the occasion of his 60th birthday. The book begins with his biography and list of publications. It contains a selection of research papers, most of which are devoted to spectral analysis of operators or operator pencils with applications to ordinary and partial differential equations. Other papers deal with time varying systems, interpolation and factorization problems and topics from mathematical physics. About half of the papers contain further developments in the theory of operators in spaces with an indefinite metric and treat new applications. The book is of interest to a wide audience of pure and applied mathematicians.

Interpolation and Realization Theory with Applications to Control Theory Vladimir Bolotnikov, Sanne ter Horst, André C.M. Ran, Victor Vinnikov, 2019-04-08 This volume is devoted to Joseph A. Joe Ball's contributions to operator theory and its applications and in celebration of his seventieth birthday. Joe Ball's career spans over four and a half decades, starting with his work on model theory and related topics for non-contractions and operators on multiply connected domains. Later on, more applied operator theory themes appeared in his work involving factorization and interpolation for operator valued functions with extensive applications in system and control theory. He has worked on nonlinear control, time varying systems and more recently on multidimensional systems and noncommutative H^∞ theory on the unit ball and polydisk and more general domains, and these are only the main themes in his vast oeuvre. Fourteen research papers constitute the core of this volume, written by mathematicians who have collaborated with Joe or have been influenced by his vast mathematical work. A curriculum vitae, a publications list and a list of Joe Ball's PhD students are included in this volume, as well as personal reminiscences by colleagues and friends. Contributions by Yu. M. Many problems of the engineering sciences physics and mathematics lead to convolution equations and their various modifications Convolution equations on a half line can be studied by having recourse to the methods and results of the theory of Toeplitz and Wiener Hopf operators Convolutions by integrable kernels have continuous symbols and the Cauchy singular integral operator is the most prominent example of a convolution operator with a piecewise continuous symbol The Fredholm theory of Toeplitz and Wiener Hopf operators with continuous and piecewise continuous matrix symbols is well presented in a series of classical and recent monographs Symbols beyond piecewise continuous symbols have discontinuities of oscillating type Such symbols emerge very naturally For example difference operators are nothing but convolution operators with almost periodic symbols the operator defined by A

The Schur Complement and Its Applications Fuzhen Zhang, 2006-03-30 What's in a name To paraphrase Shakespeare's Juliet that which illie Haynsworth called the Schur complement by any other name would be just as beautiful Nevertheless her 1968 naming decision in honor of Issai Schur 1875-1941 has gained lasting acceptance by the mathematical community The Schur complement plays an important role in matrix analysis statistics numerical analysis and many other areas of mathematics and its applications Our goal is to expose the Schur complement as a rich and basic tool in mathematical research and applications and to discuss many significant results that illustrate its power and fertility Although our book was originally conceived as a research reference it will also be useful for graduate and upper division undergraduate courses in mathematics applied mathematics and statistics The contributing authors have developed an exposition that makes the material accessible to readers with a sound foundation in linear algebra The eight chapters of the book Chapters 0-7 cover themes and variations on the Schur complement including its historical development basic properties eigenvalue and singular value inequalities matrix inequalities in both finite and infinite dimensional settings closure properties and applications in statistics probability and numerical analysis The chapters need not be read in the order presented and the reader should feel at leisure to browse freely through topics of interest
