Computer Aided Systems Theory - EUROCAST'99 Franz Pichler, Roberto Moreno-Diaz, Peter Kopacek, 2007-03-02 Computer Aided Systems Theory CAST deals with the task of contributing to the creation and implementation of tools for the support of usual CAD tools for design and simulation by formal mathematical or logical means in modeling Naturally the basis for the construction and implementation of CAST software is provided by the existing current knowledge in modeling and by the experience of practitioners in engineering design Systems Theory as seen from the viewpoint of CAST research and CAST tool development has the role of providing formal frameworks and related theoretical knowledge for model construction and model analysis We purposely do not distinguish sharply between systems theory and CAST and other similar fields of research and tool development such as for example in applied numerical analysis or other computational sciences The here documented EUROCAST conference which took place at the Vienna University of Technology reflects current mainstreams in CAST As in the previous conferences new topics both theoretical and application oriented have been addressed The presented papers show that the field is widespread and that new developments in computer science and in information technology are the driving forces The editors would like to thank the authors for providing their manuscripts in hard copy and in electronic form on time The staff of Springer Verlag Heidelberg gave as in previous CAST publications valuable support in editing this volume
