David Prologo and Charles E. Ray Jr, is the first textbook to use case examples to detail the latest image-guided interventional approaches to treat conditions, diseases, and syndromes associated with unremitting incapacitating pain. Fifty chapters by top experts in the field provide reviews of clinical conditions and technical guidance on how to perform procedures for a wide range of challenging pain conditions. The book starts with an insightful chapter on opioids with discussion of history, the devastating opioid crisis, an overview of interventional pain procedures, and the important role interventional radiologists play in decreasing opioid use in select populations. Subsequently, each of the case-based chapters is consistently formatted with the case presentation, clinical evaluation, review of pertinent imaging, development of a treatment plan including non-IR treatment options, technical details, potential complications, and a literature review of the featured technique. Key Features: A periprocedural multidisciplinary team approach emphasizes the importance of clinical evaluation of patients for making differential diagnoses and developing treatment plans. Pearls on techniques as well as pre and post-procedural patient management. Illustrated step-by-step guidance on how to perform image-guided interventional techniques in complex pain patients, including 10 high-quality video clips. Chapter discussion blocks with pertinent companion cases describe the challenges and nuances of each of the primary techniques. This book provides interventional radiologists, anesthesiologists, neurologists, and other clinicians with in-depth understanding of the clinical indications and methodologies for treating complex pain patients with advanced interventional pain management procedures.
