Educational Assessments in the Age of Generative AI Wachira, Patrick W., Liu, Xiongyi, Koc, Selma, 2024-12-24

The rapid and profound permeation of generative AI technology into all aspects of modern society also changes the landscape of higher education and thus leads to a compelling call to harness the power of AI for transforming higher education. One of the most significant areas of opportunity offered by generative AI is in the assessment of learning. The goal of assessment is to foster learning, especially essential for success beyond the classroom, and this can only be possible with well-designed assessments that have the potential for determining whether students have learned the content. By harnessing generative AI, assessments can be designed that have the potential to support inquiry-based learning and foster creativity, all essential for the development of a deeper conceptual understanding of content. Educational Assessments in the Age of Generative AI contributes to the effort to bring generative AI to the forefront of assessing students' learning by exploring how the use of generative AI tools and applications can transform and revolutionize assessment practices. Furthermore, it is devoted to exploring the use of AI in assessments to measure knowledge, skills, and students' abilities in order to prepare them for careers in the 21st century. Covering topics including academic integrity, higher education, and mathematics education, this book is an excellent resource for educators, higher education administrators, policymakers, information technology support professionals, tests and assessment developers, researchers, scholars, academicians, professionals, and more. Applications for Artificial Intelligence and Digital Forensics in National Security Reza Montasari, 2023-09-11. This book delivers insights into how social science and technology might aid new advancements in managing the complexity inherent within national and international security landscapes. The digital policing landscape is dynamic and intricate, emanating from crimes that are both persistent and transnational. Globalization, human and drug trafficking, cybercrime, terrorism, and other forms of transnational crime can have a significant impact on societies around the world. This necessitates a reassessment of what crime, national security, and policing mean. Recent global events such as human and drug trafficking, the COVID-19 pandemic, violent protests, cyber threats, and terrorist activities underline vulnerabilities residing in our current security and digital policing posture. As an interdisciplinary collection of studies, this book encapsulates concepts, theories, and technology applications, offering a comprehensive analysis of current and emerging trends and threats within the context of national and

international security Undertaking an evidence based approach this book offers an extraordinarily perceptive and detailed account of issues and solutions related to the complex national and international security landscape To this end the book presents insights into emerging and potential technological and methodological solutions as well as advancements in relation to integrated computational and analytical solutions that could be deployed for the purposes of national and international security provides a comprehensive analysis of technical ethical legal privacy and civil liberty challenges stemming from the aforementioned advancements and accordingly offers detailed recommendations supporting the design and implementation of best practices including technical ethical and legal approaches for national and international security uses The research contained in the book fits well into the larger body of work on various aspects of AI cybersecurity national security digital forensics cyberterrorism ethics human rights cybercrime and law It provides a valuable reference for LEAs and security organizations policymakers cybersecurity experts digital forensic practitioners researchers academicians graduates and advanced undergraduates and other stakeholders with an interest in national and global security     *Proceedings of International Conference on Recent Innovations in Computing* Zoltán Illés,Chaman Verma,Paulo J.
