Healthy plants are not only the aim of all gardeners farmers and foresters but they also are the principal study object of plant biologists However it is only the stressed injured or diseased plant which exhibits the full range of possible structural and functional responses to challenges by harmful abiotic or biotic stimuli consisting of highly variable forms of degeneration adaptation defense or regeneration In medicine books on diseases are obviously much more numerous than books on healthy humans in botany by comparison books on injured and diseased plants are much rarer The present text tries to comprehend the current status of our knowledge of the possible structural changes in plants suffering from e g genetic disorders mechanical stresses injuries frost heat drought and mineral deficiencies and excesses air pollutants viruses bacteria fungi parasitic vascular plants nematodes or insects Almost 75 years after the last edition of Ernst Koster's book on Pathological Plant Anatomy Pathologische Pflanzenanatomie this is the first modern compilation of pathological plant anatomy With more than 7000 references it covers the most relevant literature including many older publications which have nearly fallen into oblivion though they contain valuable and still unsurpassed information **SIDA, Contributions to Botany**, 2002
