*Consciousness and Intentionality: Models and Modalities of Attribution* D. Fisette,2013-03-14 Philosophy of mind has been one of the most active fields in philosophy for the past three decades One of the most significant factors in the development of this discipline has been the emergence of cognitive science and the interest philosophers have taken in the empirical study of mind Another equally important factor has been the naturalistic turn brought about by W V Quine His proposal that normative epistemology be replaced by empirical psychology marked a radical departure from the Fregean anti psychologism and apriorism that had characterized much of the analytic tradition in philosophy But while Quine s program of

naturalization called the attention of philosophers to empirical psychology his conception of psychology was inspired by an austere behaviorism which shunned the mentalism of intentional psychology in the Brentanian and phenomenological tradition Thus while agreeing with Brentano that the intentional idiom could not be reduced to that of the natural sciences Quine argued that it is of a piece with the indeterminacy of translation Most contributors of this collection share the cognitivist stance and believe that the mind needs to be explained rather than eliminated Three main questions are actually confronting current philosophers of mind each addressed by one or another of the contributors to the present collection

The Red and the Real Jonathan Cohen, 2009-06-25 The Red and the Real offers a new approach to longstanding philosophical puzzles about what colors are and how they fit into the natural world Jonathan Cohen argues for a role functionalist treatment of color a view according to which colors are identical to certain functional roles involving perceptual effects on subjects Cohen first argues on broadly empirical grounds for the more general relationalist view that colors are constituted in terms of relations between objects perceivers and viewing conditions He responds to semantic ontological and phenomenological objections against this thesis and argues that relationalism offers the best hope of respecting both empirical results and ordinary belief about color He then defends the more specific role functionalist account by contending that the latter is the most plausible form of color relationalism

Color Perception Steven Davis, 2000 Color has been studied for centuries but has never been completely understood Digital technology has recently sparked a burgeoning interdisciplinary interest in color The fact that color is a quality of perception rather than a physical quality brings up a host of interesting questions of interest to both artists and scholars This volume the ninth in the Vancouver Studies in Cognitive Science series brings together chapters by psychologists philosophers computer scientists and artists to explore the nature of human color perception with the aim to further our understanding of color by encouraging interdisciplinary interaction
