

A large columnar cactus, possibly a Saguaro, stands prominently in the foreground of a desert landscape. The cactus has several tall, ribbed stems that curve slightly. The ground is dry and covered with sparse, low-lying vegetation. In the background, there are rolling hills under a clear blue sky.

Columnar Cacti And Their Mutualists Evolution Ecology And Conservation:

Columnar Cacti and Their Mutualists Theodore H. Fleming, Alfonso Valiente-Banuet, 2021-11-30 Although cacti such as the saguaro and organ pipe have come to define the Sonoran Desert for many people they represent some 170 species of columnar cacti found in many parts of the Americas These giant plants are so dominant in some ecosystems that many species of animals rely on them for food and shelter They are pollinated by bats in central Mexico and Venezuela by birds and bees in northern Mexico and Peru This book summarizes our current knowledge about the ecology evolution and conservation of columnar cacti and their vertebrate mutualists to show that the very survival of these cacti depends on animals who pollinate them and disperse their seeds Contributors from the United States Mexico Venezuela and Colombia explore aspects of geology and evolution that have forged this relationship review findings in anatomy and physiology and discuss recent research in population and community ecology as well as conservation issues Ranging from the Sonoran Desert to the northern Andes these studies reflect recent progress in understanding how abiotic and biotic factors interact to influence the evolution distribution and abundance of cacti and mutualists alike In addition this book examines the ways in which humans through the process of domestication have modified these plants for economic benefit The contributors also review phylogenetic relationships between cacti and nectar feeding bats in an effort to understand how bat plant interactions have influenced the evolution of diversity and ecological specialization of both Because of the number of migratory pollinators feeding on columnar cacti the authors make conservation recommendations aimed at preserving fully functional ecosystems in arid portions of the New World tropics and subtropics No other book treats the pollination ecology of cacti in such depth or offers such a wealth of up to date material on the nectar feeding bats of the New World As scientists become increasingly concerned with the need to protect biotic interactions Columnar Cacti and Their Mutualists provides a benchmark for both conservation efforts and future research

The Saguaro Cactus David Yetman, Alberto Búrquez, Kevin Hultine, Michael Sanderson, 2020-02-25 The saguaro with its great size and characteristic shape its arms stretching heavenward its silhouette often resembling a human has become the emblem of the Sonoran Desert of southwestern Arizona and northwestern Mexico The largest and tallest cactus in the United States it is both familiar and an object of fascination and curiosity This book offers a complete natural history of this enduring and iconic desert plant Gathering everything from the saguaro's role in Sonoran Desert ecology to its adaptations to the desert climate and its sacred place in Indigenous culture this book shares precolonial through current scientific findings The saguaro is charismatic and readily accessible but also decidedly different from other desert flora The essays in this book bear witness to our ongoing fascination with the great cactus and the plant's unusual characteristics covering the saguaro's history of discovery place in the cactus family ecology anatomy and physiology genetics and ethnobotany The Saguaro Cactus offers testimony to the cactus's prominence as a symbol the perceptions it inspires its role in human society and its importance in desert ecology
