Combinatorial Constructions In Ergodic Theory And Dynamics:

Combinatorial Constructions in Ergodic Theory and Dynamics A. B. Katok, 2003 Ergodic theory studies measure preserving transformations of measure spaces These objects are intrinsically infinite and the notion of an individual point or of an orbit makes no sense Still there are a variety of situations when a measure preserving transformation and its asymptotic behavior can be well described as a limit of certain finite objects periodic processes The first part of this book develops this idea systematically Genericity of approximation in various categories is explored and numerous applications are presented including spectral multiplicity and properties of the maximal spectral type The second part of the book contains a treatment of various constructions of cohomological nature with an emphasis on obtaining interesting asymptotic behavior from approximate pictures at different time scales The book presents a view of ergodic theory not found in other expository sources It is suitable for graduate students familiar with measure theory and basic functional analysis

Combinatorial constructions in ergodic theory and dynamics A. B. Katok, 2003 **Handbook of Dynamical Systems** A. Katok, B. Hasselblatt, 2005-12-17 This second half of Volume 1 of this Handbook follows Volume 1A which was published in 2002 The contents of these two tightly integrated parts taken together come close to a realization of the program formulated in the introductory survey Principal Structures of Volume 1A The present volume contains surveys on subjects in four areas of dynamical systems Hyperbolic dynamics parabolic dynamics ergodic theory and infinite dimensional dynamical systems partial differential equations Written by experts in the field The coverage of ergodic theory in these two parts of Volume 1 is considerably more broad and thorough than that provided in other existing sources The final cluster of chapters discusses partial differential equations from the point of view of dynamical systems

Dynamical Systems Albert Fathi, J.-C. Yoccoz, 2006-02-02 A collection of up to date research and classic papers reflecting the work of Michael Herman

Handbook of Dynamical Systems B. Hasselblatt, A. Katok, 2002-08-20 Volumes 1A and 1B These volumes give a comprehensive survey of dynamics written by specialists in the various subfields of dynamical systems The presentation attains coherence through a major introductory survey by the editors that organizes the entire subject and by ample cross references between individual surveys The volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the field and to mathematicians active in other branches of mathematics who wish to learn about contemporary ideas and results dynamics Assuming only general mathematical knowledge the surveys lead the reader towards the current state of research in dynamics Volume 1B will appear 2005

Mathematics of Complexity and Dynamical Systems Robert A. Meyers, 2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional

structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers

Statistical Decision Functions and Random Processes have been organized every three years since 1956 During the eighteen years of their existence the Prague Conferences developed from a platform for presenting results obtained by a small group of researchers into a probabilistic congress this being documented by the increasing number of participants as well as of presented papers The importance of the Seventh Prague Conference has been emphasized by the fact that this Conference was held jointly with the eighth European Meeting of Statisticians This joint meeting was held from August 18 to 23 1974 at the Technical University of Prague The Conference was organized by the Institute of Information Theory and Automation of the Czechoslovak Academy of Sciences and was sponsored by the Czechoslovak Academy of Sciences by the Committee for the European Region of the Institute of Mathematical Statistics and by the International Association for Statistics in Physical Sciences More than 300 specialists from 25 countries participated in the Conference In 57 sessions 164 papers including 17 invited papers were read 128 of which are published in the present two volumes of the Transactions of the Conference

Volume A includes papers related mainly to probability theory and stochastic processes whereas the papers of Volume B concern mainly statistics and information theory
