Combinatorics '90 A. Barlotti, A. Bichara, P.V. Ceccherini, G. Tallini, 1992-08-17 This volume forms a valuable source of information on recent developments in research in combinatorics with special regard to the geometric point of view Topics covered include finite geometries arcs caps special varieties in a Galois space generalized quadrangles Benz planes foundation of geometry partial geometries Buekenhout geometries transitive permutation sets flat transitive geometries design theory finite groups near rings and semifields MV algebras coding theory cryptography and graph theory in its geometric and design aspects *EUROCODE '90* Gerard Cohen, Pascale Charpin, 1991-07-24 This book presents a selection of the papers presented at EUROCODE 90 the symposium on coding theory held in Udine Italy November 1990 It gives the state of the art on coding in Europe and ranges from theoretical topics like algebraic geometry and combinatorial coding to applications like modulation real space decoding and VLSI implementation The book is divided into eight sections Algebraic codes Combinatorial codes Geometric codes Protection of information Convolutional codes Information theory Modulation Applications of coding Five of the sections are introduced by an invited contribution **Encyclopedia of Optimization** Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling *Configurations of Points and Lines* Branko Grünbaum, 2009 This is the only book on the topic of geometric configurations of points and lines It presents in detail the history of the topic with its surges and declines since its beginning in 1876 It covers all the advances in the field since the revival of interest in geometric configurations some 20 years ago The author's contributions are central to this revival In particular he initiated the study of 4 configurations that is those that contain four points on each line and four lines through each point the results are fully described in the text The main novelty in the approach to all geometric configurations is the concentration on their symmetries which make it possible to deal with configurations of rather large sizes The book brings the readers to the limits of present knowledge in a leisurely way enabling them to enjoy the material as well as entice them to try their hand at expanding it *Geometry of Sporadic Groups: Volume 1*, Petersen and Tilde Geometries A.
