Contemporary Economic Systems A Regional And Country Approach:

Contemporary Economic Systems Nicholas V. Gianaris, 1993-02-28 Gianaris examines the theoretical and practical aspects of different economic systems in countries with varying ideologies. These include the United States, the European Community, and Japan with their capitalist or free market economies; the Swedish welfare state; communist China; and the former Soviet republics and Eastern Europe with their movement toward free markets and democratization. This interplay of economics and politics seen in the world arena presents new problems of production and distribution as well as new rules and institutions. This work analyzes the dramatic developments now underway in many parts of the world and outlines a trend toward economic and political synthesis or convergence. This work will be of interest to scholars and students of comparative economic systems, political economy, comparative politics, and international economic relations.

Setbacks and Advances in the Modern Latin American Economy Pablo A. Baisotti, 2021-12-30 This volume

explores several notable themes related to the economy in Latin America and offers insightful historical perspectives to understand national regional and global issues in the continent since the beginning of the 20th century to the present day. The collected essays focus on economic crises, the relationship of growth models to society and politics, the fluctuations of local economies and regional protests. Other aspects of consideration in this area include the evolution of integrated regional trading blocs, the informal economy and the destruction of the productive potential that has had a serious social, cultural and environmental impact. The volume refuses to impose a traditional and uncritical linear historical narrative onto the reader and instead proposes an alternative interpretation of the past and its relation to the present.

The Shared Space Milton Santos, 2017-08-29. Originally published in 1979. In this forcefully argued book, Milton Santos shows that contemporary explanations of urbanization and spatial organization in underdeveloped countries are inadequate. This failure is attributable to their origins in theories elaborated to explain the development of advanced Western societies. Santos' work provides the basis for the new theory which is so badly needed. He describes the urban economy in these countries in terms of two circuits of activity: an upper circuit consisting of those enterprises and structures which are based on modern technology and are oriented towards the advanced capitalist world, and a lower circuit comprised of more traditional processes and forms of exchange. The dialectical interaction of these two circuits is seen to generate the patterns of growth, forms of State intervention and, above all, the spatial organization characteristic of Third World economies. This was a revision and translation of *L'Espace Partag* 1975.
