While it is generally accepted that flood pulsing and disturbance dynamics are critical to wetland viability there is as yet no consensus among those responsible for wetland restoration about how best to plan for those phenomena or even whether it is really necessary to do so at all In this groundbreaking book Dr Beth Middleton draws upon the latest research from around the world to build a strong case for making flood pulsing and disturbance dynamics integral to the wetland restoration planning process While the initial chapters of the book are devoted to laying the conceptual foundations most of the coverage is concerned with demonstrating the practical implications for wetland restoration and management of the latest ecological theory and research It includes a fascinating case history section in which Dr Middleton explores the restoration models used in five major North American European Australian African and Asian wetland projects and analyzes their relative success from the perspective of flood pulsing and disturbance dynamics planning Wetland Restoration also features a wealth of practical information useful to all those involved in wetland restoration and management including A compendium of water level tolerances seed germination seedling recruitment adult survival rates and other key traits of wetland plant species A bibliography of 1 200 articles and monographs covering all aspects of wetland restoration A comprehensive directory of wetland restoration ftp sites worldwide An extensive glossary of essential terms Wetland Restoration Flood Pulsing and Disturbance Dynamics is a valuable working resource for wetland restoration consultants employees of government agencies and professional land managers as well as ecologists foresters and geologists involved with wetland restoration and management It is also an excellent text for advanced courses in wetland restoration

**Necessary Work** Max G. Geier, 2007 The H J Andrews Experimental Forest Andrews Forest is both an idea and a particular place It is an experimental landscape a natural resource and an ecosystem that has long inspired many people On the landscape of the Andrews Forest some of those people built the foundation for a collaborative community that fosters closer communication among the scientists and managers who struggle to understand how that ecosystem functions and to identify optimal management strategies for this and other national forest lands in the Pacific Northwest People who worked there generated new ideas about forest ecology and related ecosystems Working together in this place they generated ideas developed research proposals and considered the implications of their work They functioned as individuals in a science based community that emerged and evolved over time Individuals acted in a confluence of personalities personal choices and power relations In the context of this unique landscape and serendipitous opportunities those people created an exceptionally potent learning environment for science and management Science in this context was largely a story of personalities not simply a matter of test tubes experimental watersheds or top down management sponsored by a large

federal agency or university Ideas flowed in a constructed environment that eventually linked people place and community with an emerging vision of ecosystem management Drawing largely on oral history this book explores the inner workings and structure of that science based community Science themes management issues specific research programs the landscape itself and the people who work there are all indispensable components of a complex web of community the Andrews group The first four chapters explore the origins of the Forest Service decision to establish an experimental forest in the west central Oregon Cascades in 1948 and the people and priorities that transformed that field site into a prominent facility for interdisciplinary research in the coniferous biome of the International Biological Programme in the 1970s Later chapters explore emerging links between long term research and interdisciplinary science at the Andrews Forest Those links shaped the groups response to concerns about logging in old growth forests during the 1980s and 1990s Concluding chapters explore how scientists in the group tried to adapt to new roles as public policy consultants in the 1990s without losing sight of the community values that they considered crucial to their earlier accomplishments
