ABSTRACT: Generalizing the graded commutator in superalgebras, we propose a new bracket operation on the space of graded operators with an involution. We show that the Lax representation of the two-dimensional $N=(1|1)$ supersymmetric Toda lattice hierarchy can be realized via the generalized bracket operation; this is important in constructing the semiclassical (continuum) limit of this hierarchy. We construct the continuum limit of the $N=(1|1)$ Toda lattice hierarchy, the dispersionless $N=(1|1)$ Toda hierarchy. In this limit, we obtain the Lax representation, with the generalized graded bracket becoming the corresponding Poisson bracket on the graded phase superspace.

1. Introduction

An integrable $N=(1|1)$ supersymmetric generalization of the two-dimensional bosonic Toda lattice hierarchy (2DTL hierarchy) [1] was proposed in [2], [3]. It is given by an infinite system of evolution equations (flows) for an infinite set of bosonic and fermionic lattice fields evolving in two bosonic and two fermionic infinite “towers” of times; as a subsystem, it involves an $N=(1|1)$ supersymmetric integrable generalization of the 2DTL equation, which is called the $N=(1|1)$ 2DTL in what follows.

Two new infinite series of fermionic flows of the $N=(1|1)$ 2DTL hierarchy were constructed in [4]–[6]. This hierarchy was shown to actually have a higher symmetry, namely, the $N=(2|2)$ supersymmetry. Together with the previously known bosonic flows of the $N=(1|1)$ 2DTL hierarchy, these flows are symmetries of the $N=(1|1)$ 2DTL equation. The continuum limit of that equation with respect to the lattice constant [7] is a three-dimensional nonlinear equation, called the continuum or dispersionless $N=(1|1)$ 2DTL equation.

Continuum Limit Of The Toda Lattice:

A Continuum Limit of the Toda Lattice Percy Deift, Kenneth T-R McLaughlin, 1998 In this book the authors describe a continuum limit of the Toda ODE system obtained by taking as initial data for the finite lattice successively finer discretizations of two smooth functions Using the integrability of the finite Toda lattice the authors adapt the method introduced by Lax and Levermore for the study of the small dispersion limit of the Korteweg de Vries equations to the case of the Toda lattice A general class of initial data is considered which permits in particular the formation of shocks A feature of the analysis in this book is an extensive use of techniques from the theory of Riemann Hilbert problems **Continuum**
