

Conclusions and Implications

This study demonstrates the critical importance of integrating resilience, equality, and well-being into the governance structures of large infrastructure projects in Nepal. The thematic analysis of both projects reveals that while these projects achieved technical success through collaborative governance, they fall short in addressing the broader goals of sustainable development. The marginalization of local communities, inadequate attention to environmental resilience, and the unequal distribution of benefits underscore the limitations of the current governance models (Mendis et al., 2023; Jones et al., 2013). Even though project managers acknowledge the ethical responsibilities and advantages of involving local communities in decision-making, project organizations cannot often effectively implement this inclusive approach in practice (Maddaloni & Sabini, 2022).

To achieve truly sustainable development, future projects must adopt governance frameworks that genuinely incorporate the voices and needs of all stakeholders, particularly those most vulnerable to the impacts of such projects (Moaallemi et al., 2020; Lima, 2021). By prioritizing resilience, equality, and well-being, these projects can not only meet their technical and economic objectives but also contribute to the long-term sustainability and prosperity of the communities they affect. The insights gained from this research provide valuable guidance for policymakers, project managers, and other stakeholders involved in infrastructure development in Nepal. By addressing the shortcomings identified in this study, future projects can better align with sustainable development goals, ensuring that the benefits are equitably distributed and that the environmental and social impacts are responsibly managed. The study highlights power imbalances within collaborative governance frameworks, where the voices of local communities are often marginalized. Addressing these imbalances requires mechanisms such as stakeholder mapping, power-neutral facilitation, and institutionalized frameworks for equitable participation, ensuring that all actors, particularly vulnerable groups, have a meaningful influence on decision-making (Mabeouk et al., 2014; Kovanen et al., 2023; Weslin & Montgomerie, 2024).

The implications of this research are both theoretical and practical, providing valuable insights into the role of collaborative governance in sustainable development. Theoretically, the study enhances the understanding of governance frameworks by emphasizing the integration of resilience, equality, and well-being as core principles for achieving sustainable development. It contributes to the growing body of literature on collaborative governance by showcasing its potential to address complex socio-environmental challenges while also highlighting power asymmetries and stakeholder exclusion as critical barriers. Practically, the findings offer actionable recommendations for policymakers, project managers, and development practitioners to design more inclusive and equitable governance structures. By cultivating community engagement, ensuring equitable distribution of benefits, and prioritizing environmental and social resilience, the study underscores the need for adaptive governance models that align with SDGs. These insights are particularly relevant for developing countries like Nepal, where integrating diverse stakeholder perspectives can significantly improve the outcomes of large-scale infrastructure projects.
