Alfred Russel Wallace's key work *Contributions to the Theory of Natural Selection* is a foundational work. Wallace, a prominent naturalist and Charles Darwin's colleague, made vital contributions to the development of natural selection theory, and this collection of writings is a testimony to his trailblazing views. Wallace provides his views into the mechanisms of evolution and natural selection in a series of articles and papers in the book. He explores several elements of evolutionary biology in these essays, such as the concept of adaptive coloration in animals, species distribution, and the function of sexual selection in evolution. The notion of Wallace's Line, which delineates the boundary between distinct zoogeographical zones in Southeast Asia, is one of Wallace's most important achievements. This concept has aided our knowledge of how species are dispersed over the world. Wallace's work also includes his opinions on human evolution and the probable impact of natural selection on human mental and moral qualities. In this sense, his theories provoked significant discussions and controversies within the scientific world. *Contributions to the*

Contributions to the Theory of Natural Selection Alfred Russel Wallace, 2017-10-09 I now wish to say a few words on the reasons which have led me to publish this work The second essay especially when taken in connection with the first contains an outline sketch of the theory of the origin of species by means of what was afterwards termed by Mr Darwin natural selection as conceived by me before I had the least notion of the scope and nature of Mr Darwin's labours They were published in a way not likely to attract the attention of any but working naturalists and I feel sure that many who have heard of them have never had the opportunity of ascertaining how much or how little they really contain It therefore happens that while some writers give me more credit than I deserve others may very naturally class me with Dr Wells and Mr Patrick Matthew who as Mr Darwin has shown in the historical sketch given in the 4th and 5th Editions of the Origin of Species certainly propounded the fundamental principle of natural selection before himself but who made no further use of that principle and failed to see its wide and immensely important applications The present work will I venture to think prove that I both saw at the time the value and scope of the law which I had discovered and have since been able to apply it to some purpose in a few original lines of investigation But here my claims cease I have felt all my life and I still feel the most sincere satisfaction that Mr *Darwin's Theory of Natural Selection: Contributions to the theory of natural selection* John M.
