Control of Cellular Division and Development Dennis Cunningham,Eugene Goldwasser,James Watson,C. Fred Fox,1981

Annual Plant Reviews, Cell Cycle Control and Plant Development Dirk Inzé,2007-06-25 The cell cycle in plants consists of an ordered set of events including DNA replication and mitosis that culminates in cell division As cell division is a fundamental part of a plant s existence and the basis for tissue repair development and growth a full understanding of all aspects of this process is of pivotal importance Cell Cycle Control and Plant Development commences with an introductory chapter and is broadly divided into two parts Part 1 details the basic cell machinery with chapters covering cyclin dependent kinases CDKs cyclins CDK inhibitors proteolysis CDK phosphorylation and E2F DP transcription factors Part 2 which describes the cell cycle and plant development covers cell cycle activation cell cycle control during leaf development endoreduplication the cell cycle and trichome fruit and endosperm development the hormonal control of cell division and environmental stress and cell cycle exit The editor of this important book Professor Dirk Inz well known and respected internationally has brought together an impressive team of contributing authors providing an excellent new volume in Blackwell Publishing s Annual Plant Reviews Series The book is an essential purchase for research teams working in the areas of plant sciences and molecular cell and developmental biology All libraries in universities and research establishments where biological sciences are studied and taught should have copies of this essential and timely volume **Cell Growth**

Larson-Rabin,2007 *Signaling-Mediated Control of Cell Division* Swathi Arur,2017-02-28 This volume covers the current knowledge base on the role of signaling and environmental pathways that control the normal development of germline stem cells meiotic progression of oocytes events of oocyte maturation and fertilization and the birth of an embryo Germ cells are uniquely poised to sustain life across generations through the fusion of oocyte and sperm Because of the central importance of germ cells to life much work has been dedicated to obtaining a clear understanding of the molecular and signaling events that control their formation and maintenance Germ cells are set aside from somatic cells in the embryo and go through specialized meiotic cell cycles as the animal matures These cell cycles are interspersed with long periods of arrest In human females meiosis I is initiated in the fetus At birth oocytes are arrested in meiosis I after puberty every month an oocyte initiates meiosis II ovulation Upon sperm availability these cells are fertilized generate an embryo and the cycle of life continues During meiotic I progression and arrest the fitness of oocytes and their progeny are likely influenced by environmental cues and signaling pathways A lot of recent work has focused on understanding the mechanisms that regulate oocyte fitness and quality in humans and vertebrates Much of our understanding on the events of meiosis I and germline stem cell populations comes from work in invertebrates wherein the germline stem cells produce oocytes continuously through adult development In both invertebrates and vertebrates nutritional and signaling pathways control the regulation of stem cells in such a manner so as to couple production of gametes with the nutritional availability Additionally mature oocytes arrest both in meiosis I and meiosis II and signaling and nutritional pathways have been shown to regulate their formation and maintenance such that despite long periods of arrest the oocyte quality is assured and errors in chromosome segregation and varied cytoplasmic events are minimal Physiological Zoology Charles Manning Child,Warder Clyde Allee,1928 **Bulletin of the American Society for the Control of Cancer** American Cancer Society,1925 **The Library of Original Sources: 19th and 20th**
