Quality Instruction and Intervention for Elementary Educators Brittany L. Hott, Pamela Williamson, 2024-10-02 Effective teaching starts with quality instruction that most students respond well to. However, about 35% of students will require specialized and more intensive instruction to meet academic and behavioral standards. Both students with exceptionalities who are eligible to receive special education and related services and students who are placed at risk due to circumstance require, deserve, and are legally entitled to quality intervention. Quality Instruction and Intervention for Elementary Educators offers an accessible resource for educators interested in evidence-based strategies to ensure all students have access to an excellent education. Two dedicated chapters authored by leading content and strategy experts in the field are devoted to content areas. The first chapter focuses on quality instruction with academic subject matter specialists as lead authors with interventionists supporting. The second chapter focuses on effective intervention with the interventionists taking the lead author roles and academic subject matter specialists supporting. Between the two chapters is a dialogue between the teams of authors bridging instruction and intervention. This unique approach bridges the gap between quality instruction and effective intervention, an often overlooked component of teacher education. The book also includes dedicated chapters on the integration of instructional technology and executive functioning. After reading the book, educators will be able to describe the components of effective instruction and intervention in each of the content areas, access empirically validated materials, and locate resources for continued learning.

**Artificial Intelligence and Society** Dr. R. B. Konda, Dr. Mahesh M. Ganwar, Prof. Kaveri Kori, Dr. Hanmanthappa Sedamkar, Dr. Manikamma S., Dr. Saibanna, & Dr. Mitradevi Halimani, 2024-11-08 The integration of AI-powered e-gamified modules in education has significantly impacted students' scientific attitudes and academic achievement in science. This study investigates how AI-driven gamification enhances engagement, critical thinking, and problem-solving skills, leading to improved academic performance. AI enables personalized learning experiences by adapting to individual student needs, thus fostering a more interactive and learner-centered approach. E-gamified modules provide immediate feedback, motivating students to correct errors and reinforce learning. The main aim of the study is to find out whether there is any significant difference between pre-test/post-test mean scores of secondary school students taught with and without AI-powered e-gamified modules in science. 80 samples were chosen by employing purposive sampling technique. The researcher has used standardized PhET simulation modules. The results show that the post-test mean scores of the experimental group are significantly different than that of the control group. The study suggests that when students are exposed to AI-powered gamified learning environments, they develop a more positive disposition toward scientific methods and show measurable

improvements in performance This research highlights the potential of AI in transforming traditional education by making learning more dynamic personalized and effective thereby fostering a deeper understanding of science and its applications
