A VISION OF NEP 2020 - INDIA'S 2047 ON HIGHER EDUCATION Dr. M. Mani, Dr. C. Ashok Kumar, 2023-08-10

Education is the most powerful weapon for future development. In the 21st century, we saw that the world of education is changing every moment. The Indian government has announced its ambitious vision for the country to become a developed nation by the year 2047. This announcement was made on the occasion of India's 75th anniversary of independence, and the government has laid out a roadmap to achieve this goal. The first step to achieving India's HEI goals by 2047 is redesigning the higher education institutions. HEI architecture for a resilient and student-centric ecosystem. The new policies must bridge the gap between education and the average Indian who no longer wants to be tied to traditional time-bound degrees. HEI must make skill development an integral part of the curriculum, allowing students to learn at their pace and charting their learning course. The onus is on each stakeholder to keep the student at the center as they redesign the higher education architecture. By focusing on the strengths of its higher education system and acknowledging areas that need to be reformed, India can meet its own students' needs and attract students from around the world.

Artificial Intelligence and the Two Singularities Calum Chace, 2018-04-20

The science of AI was born a little over 60 years ago, but for most of that time, its achievements were modest. In 2012, it experienced a big bang when a branch of statistics called Machine Learning and a sub-branch called Deep Learning was applied to it. Now, machines have surpassed humans in image recognition, and they are catching up with us at speech recognition and natural language processing. Every day, the media

reports the launch of a new service a new product and a new demonstration powered by AI When will it end The surprising truth is the AI revolution has only just begun Artificial Intelligence and the Two Singularities argues that in the course of this century the exponential growth in the capability of AI is likely to bring about two singularities points at which conditions are so extreme that the normal rules break down The first is the economic singularity when machine skill reaches a level that renders many of us unemployable and requires an overhaul of our current economic and social systems The second is the technological singularity when machine intelligence reaches and then surpasses the cognitive abilities of an adult human relegating us to the second smartest species on the planet These singularities will present huge challenges but this book argues that we can meet these challenges and overcome them If we do the rewards could be almost unimaginable This book covers Recent developments in AI and its future potential The economic singularity and the technological singularity in depth The risks and opportunities presented by AI What actions we should take Artificial intelligence can turn out to be the best thing ever to happen to humanity making our future wonderful almost beyond imagination But only if we address head on the challenges that it will raise Calum Chace is a best selling author of fiction and non fiction books and articles focusing on the subject of artificial intelligence He is a regular speaker on artificial intelligence and related technologies and runs a blog on the subject at www.pandoras.brain.com Prior to becoming a full time writer and speaker he spent 30 years in business as a marketer a strategy consultant and a CEO He studied philosophy at Oxford University where he discovered that the science fiction he had been reading since boyhood was simply philosophy in fancy dress
