Camera Obscura:

Camera Obscura Abelardo Morell, 2004 Abelardo Morell author of last year's award winning *A Book of Books* makes magical camera obscura images in darkened interiors The deceptively simple process he blacks out all of the windows leaving just a pinhole opening in one of them produces photographs of astonishing complex beauty Due to the nature of refracted light the world outside his darkened room is projected upside down onto the interior space within which he works converting the room in effect into the interior of a camera Morell then photographs the results with a large format view camera often requiring exposures of eight hours or more Locations around the world were chosen for the interesting details and juxtapositions they would elicit the Empire State Building lies across a bedspread in a midtown Manhattan interior the Tower of London is imprinted on the walls of a room in the Tower Hotel the countryside in rural Cuba Morell's birthplace plays across the walls of a crumbling interior that is rich with the patina of its own history Every image is full of surprises and revelations

H. Hammond, 1981 The fascinating illustrated history of the original camera an optical viewing device once widely used but now almost forgotten This chronicle of its long history is told through the writings of those who made or used the camera obscura for scientific or artistic purposes and those authors who recorded its varied uses It recalls how this versatile instrument was used for astronomical observations as a sketching aid by travellers and amateur artists and on a grander scale as an entertainment or tourist attraction

perspective on the visual culture of the nineteenth century reassessing problems of both visual modernism and social modernity Inverting conventional approaches Crary considers the problem of visibility not through the study of art works and images but by analyzing the historical construction of the observer He insists that the problems of vision are inseparable from the operation of social power and examines how beginning in the 1820s the observer became the site of new discourses and practices that situated vision within the body as a physiological event Alongside the sudden appearance of physiological optics Crary points out theories and models of subjective vision were developed that gave the observer a new autonomy and productivity while simultaneously allowing new forms of control and standardization of vision Crary examines a range of diverse work in philosophy in the empirical sciences and in the elements of an emerging mass visual culture He discusses at length the significance of optical apparatuses such as the stereoscope and of precinematic devices detailing how they were the product of new physiological knowledge He also shows how these forms of mass culture usually labeled as realist were in fact based on abstract models of vision and he suggests that mimetic or perspectival notions of vision and representation were initially abandoned in the first half of the nineteenth century within a variety of powerful institutions and discourses well before the modernist painting of the 1870s and 1880s
