The first study of Anglo Saxon and Anglo Norman canals and waterways this book is based on new evidence surrounding the nature of water transport in the period England is naturally well endowed with a network of navigable rivers especially the easterly systems draining into the Thames Wash and Humber The central middle ages saw innovative and extensive development of this network including the digging of canals bypassing difficult stretches of rivers or linking rivers to important production centres The eleventh and twelfth centuries seem to have been the high point for this dynamic approach to water transport after 1200 the improvement of roads and bridges increasingly diverted resources away from the canals many of which stagnated with the reassertion of natural drainage patterns The new perspective presented in this study has an important bearing on the economy landscape settlement patterns and inter regional contacts of medieval England Essays from economic historians geographers geomorphologists archaeologists and place name scholars unearth this neglected but important aspect of medieval engineering and economic growth *Senate documents* ,1886 **English Rivers and Canals** Paul Atterbury,1984 Describes the history of the inland waterways of England and discusses the use of England s rivers and canals for transportation *The Statesman's Year-book* Frederick Martin,Sir John Scott Keltie,Isaac Parker Anderson Renwick,Mortimer Epstein,Sigfrid Henry Steinberg,John Paxton,Brian Hunter (Librarian),1911
