Cancer And The Environment:

Cancer and the Environment Institute of Medicine, Board on Health Sciences Policy, Roundtable on Environmental Health Sciences, Research, and Medicine, 2002-08-01 The Roundtable on Environmental Health Sciences Research and Medicine wanted to address the link between environmental factors and the development of cancer in light of recent advances in genomics They asked what research tools are needed how new scientific information can be applied in a timely manner to reduce the burden of cancer and how this can be flexible enough to treat the individual **Reducing Environmental**

Cancer Risk: What We Can Do Now LaSalle D. Leffall, Margaret L. Kripke, 2010-11-22 The statistics are staggering this year 1.5 million Americans will be diagnosed with cancer and more than 550 000 will die from the disease One underlying cause of these high numbers may be the failure of the US government to regulate toxic substances The President's Cancer Panel Report examines the risks posed by the chemicals in our environment and offers suggestions on what we can do to improve public health and safety In the strongest words it urges the President to use the power of your office to remove the carcinogens and other toxins from our food water and air that needlessly increase health care costs cripple our Nation's productivity and devastate American lives **Cancer as an Environmental Disease** Polyxeni Nicolopoulou-Stamati, Luc Hens, Vyvyan C. Howard, N. Van Larebeke, 2004-04-30 These pages contain a number of chapters from specialists in the field who consider from a number of different perspectives the currently available evidence that supports the environmental cancer aetiology hypothesis This constitutes the first part of the book In the second part of the book an examination of the policy implications of accepting that the cancer epidemic may essentially be preventable is presented This will pose some difficult problems for politicians and decision makers who will have to consider adopting policies that may damage the economy in the short term in order to reap health benefits which will only become apparent several decades in the future

Living Downstream Sandra Steingraber, 1997-05-20 This riveting investigation into the man made causes of cancer combines gripping personal narrative with scientific analysis to present clearly and succinctly the growing body of evidence linking cancer to environmental contamination **Breast Cancer and the Environment** Institute of Medicine, Board on Health Sciences Policy, Board on Health Care Services, Committee on Breast Cancer and the Environment: The Scientific Evidence, Research Methodology, and Future Directions, 2012-04-20 Breast cancer remains the most common invasive cancer among women The primary patients of breast cancer are adult women who are approaching or have reached menopause 90 percent of new cases in US women in 2009 were diagnosed at age 45 or older Growing knowledge of the complexity of breast cancer stimulated a transition in breast cancer research toward elucidating how external factors may influence the etiology of breast cancer Breast Cancer and the Environment reviews the current evidence on a selection of environmental risk factors for breast cancer considers gene environment interactions in breast cancer and explores evidence based actions that might reduce the risk of breast cancer The book also recommends further integrative research into the

elements of the biology of breast development and carcinogenesis including the influence of exposure to a variety of environmental factors during potential windows of susceptibility during the full life course potential interventions to reduce risk and better tools for assessing the carcinogenicity of environmental factors For a limited set of risk factors evidence suggests that action can be taken in ways that may reduce risk for breast cancer for many women avoiding unnecessary medical radiation throughout life avoiding the use of some forms of postmenopausal hormone therapy avoiding smoking limiting alcohol consumption increasing physical activity and minimizing weight gain Breast Cancer and the Environment sets a direction and a focus for future research efforts The book will be of special interest to medical researchers patient advocacy groups and public health professionals

Living Downstream Sandra Steingraber, 2010-03-23 Sandra Steingraber biologist poet and survivor of cancer in her twenties brings all three perspectives to bear on the most important health and human rights issue of our time the growing body of evidence linking cancer to environmental contaminations Her scrupulously researched scientific analysis ranges from the alarming worldwide patterns of cancer incidence to the sabotage wrought by cancer promoting substances on the intricate workings of human cells In a gripping personal narrative she travels from hospital waiting rooms to hazardous waste sites and from farmhouse kitchens to incinerator hearings bringing to life stories of communities in her hometown and around the country as they confront decades of industrial and agricultural recklessness Living Downstream is the first book to bring together toxics release data now finally made available through under the right to know laws and newly released cancer registry data Sandra Steingraber is also the first to trace with such compelling precision the entire web of connections between our bodies and the ecological world in which we eat drink breathe and work Her book strikes a hopeful note throughout for while we can do little to alter our genetic inheritance we can do a great deal to eliminate the environmental contributions to cancer and she shows us where to begin Living Downstream is for all readers who care about the health of their families and future generations Sandra Steingraber's brave clear and careful voice is certain to break the paralyzing silence on this subject that persists more than three decades after Rachel Carson's great early warning

Environmental Factors, Genes, and the Development of Human Cancers Deodutta Roy, M. Tevfik Dorak, 2010-09-11 Cancer is a complex disease Only 5-10% of human cancers are hereditary in nature Many of us think of environmental agents when we think of carcinogens The environment includes all that surrounds us and environmental influences include not only chemical physical and biological toxicants but also diet and lifestyle In this broadest sense the environment contributes substantially in the development of human cancer This book will describe how environment contributes to malignant transformation leading to profound changes in the genetic and signaling networks that control the functioning of the cell It will critically discuss the understanding of the effects of environment on the development progression and metastasis of cancer with current knowledge of the signaling networks that support functioning of transformed human cells Genes and environmental factors that influence the origins of cancer are not necessarily the same

as those that contribute to its progression and metastasis Susceptibility gene variants for each specific cancer are being identified with emerging evidence of gene environment interaction Gene environment interactions will be discussed through each specific cancer based approach to address the question of how genetic variations can influence susceptibility to the individual type of cancer It will also highlight and summarize epigenetic changes that increase the risk for susceptibility to a particular type of cancer particularly in the presence of specific environmental factors Thus this book will contain chapters from the world s experts focused on the current evidences that support the role of environment in the cancer etiology and in the growth of malignant lesions and discuss who may be susceptible to environmental influences *Carcinogens in the Environment* Council on Environmental Quality (U.S.),1976 **Living Downstream; A Scientist's Personal Investigation of Cancer and the Environment** S. Steingraber,1998 **Link Between the Environment and Cancer** United States. Congress. House. Committee on Science and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment,1984 **Environmental Pollution and Cancer and Heart and Lung Disease** Task Force on Environmental Cancer and Heart and Lung Disease (U.S.),1978 Environmental Cancer and Heart and Lung Disease Task Force on Environmental Cancer and Heart and Lung Disease (U.S.),1983 **Assessment of Technologies for Determining Cancer Risks from the Environment** ,1981 **Cancer and the Environment** New Jersey. Department of Environmental Protection,1976 **Cancer and the Environment** ,1983-01-01 *Environment and Breast Cancer* Jose Russo,2011-08-10 Breast cancer is a complex disease caused by multiple environmental and lifestyle factors interacting with genetic susceptibility across the life span Therefore environmental factors are of intense interest to both researchers and community members including women with breast cancer There is not adequate literature that addresses this issue comprehensively from epidemiological experimental and translational research perspective This book is aiming to fill this gap by gathering chapters from the most recognized experts in the field of breast biology and cancer with special interests in environmental issues Environmental Contributors to Breast Cancer United States. Congress. House. Committee on Science. Subcommittee on Environment, Technology, and Standards,2002 **Environment and Health in Louisiana** Louisiana. Governor's Task Force on Environmental Health,1984 **The Apocalypics** Edith Efron,1984 *Living Downstream* Sandra Steingraber,1997
