Assessing the Quality of Cancer Care National Research Council, Institute of Medicine, National Cancer Policy Board, Committee on Assessing Improvements in Cancer Care in Georgia, 2005-06-18 Shortly after 1998 leading members of Georgia s government medical community and public spirited citizenry began considering ways in which some of Georgia s almost 5 billion 25 year settlement from the tobacco industry s Master Settlement Agreement with the 50 states could be

used to benefit Georgia residents Given tobacco s role in causing cancer they decided to create an entity and program with the mission of making Georgia a national leader in cancer prevention treatment and research This new entity called the Georgia Cancer Coalition Inc GCC and the state of Georgia subsequently began implementing a far reaching state cancer initiative that includes five strategic goals 1 preventing cancer and detecting existing cancers earlier 2 improving access to quality care for all state residents with cancer 3 saving more lives in the future 4 training future cancer researchers and caregivers and 5 turning the eradication of cancer into economic growth for Georgia Assessing the Quality of Cancer Care identifies a set of measures that could be used to gauge Georgia s progress in improving the quality of its cancer services and in reducing cancer related morbidity and mortality

Official Gazette of the United States Patent and Trademark Office ,1997 *Cancer Care in Low-Resource Areas* National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Care Services,National Cancer Policy Forum,2017-11-14 Though cancer was once considered to be a problem primarily in wealthy nations low and middle income countries now bear a majority share of the global cancer burden and cancer often surpasses the burden of infectious diseases in these countries Effective low cost cancer control options are available for some malignancies with the World Health Organization estimating that these interventions could facilitate the prevention of approximately one third of cancer deaths worldwide Effective cancer treatment approaches are also available and can reduce the morbidity and mortality due to cancer in low resource areas But these interventions remain inaccessible for many people in the world especially those residing in low resource communities that are characterized by a lack of funds on an individual or a societal basis to cover health infrastructure and care costs As a result worse outcomes for patients with cancer are more common in low and middle income countries compared with high income countries Few guidelines and strategies for cancer control consider the appropriateness and feasibility of interventions in low resource settings and this may undermine the effectiveness of care Recognizing the challenges of providing cancer care in resource constrained settings the National Academies of Sciences Engineering and Medicine developed a two workshop series examining cancer care in low resource communities building on prior work of the National Academies The first workshop held in October 2015 focused on cancer prevention and early detection The second workshop was held in November 2016 and focused on cancer treatment palliative care and survivorship care in low resource areas This publication summarizes the presentations and discussions of this workshop
