Autoimmunity M.E. Gershwin,Yehuda Shoenfeld,2000-03-27 Of the two disciplines in parallel development for two decades tumor immunology and transplantation immunology the latter has thrived and has led to some of the most critical discoveries in immunobiology The former continues to thwart both scientists and clinicians alike The goal of immunologists in modern day research is to develop a simple and effective means to manipulate cancer in vivo possibly encompassing several venues identifying a phenotypic marker and the use of either active or passive immunization include the use of passive reagents carrying warheads to selectively destroy cancer cells or altering the basic process of cell survival This excellent multidiscipline authored volume presents a theme which has not been well described before The papers include both basic and clinical science and range from sophisticated molecular biology to little more than phenomenology e g the increased association of cancer in some autoimmune diseases and increased presentation of autoimmune phenomena in malignant condition This however is state of the art This collection of themes will be of use not only to bench scientists but also to clinicians who treat patients The book represents progress at the cutting edge of this discipline and points the way to further developments in the black box of immunology *Emerging Concepts Targeting Immune Checkpoints in Cancer and*

Autoimmunity Akihiko Yoshimura,2017-11-25 This volume reviews the current state of research on immune checkpoints and offers novel concepts It discusses the two most important immune checkpoints T lymphocyte associated antigen 4 CTLA 4 and programmed cell death 1 PD 1 It shows that antagonistic antibodies against these two molecules are highly effective in the treatment of various cancers and that PD 1 and CTLA 4 have been linked to the suppression of T cell receptor signaling

and co stimulatory molecules Further the volume examines other agents a number of cells receptors and signaling molecules that are also involved in the regulation of T cell activation and extends the concept of immune checkpoints to molecules and cells that negatively regulate T cell activation Playing essential roles in immune homeostasis they could offer new targets for cancer immunotherapy and for the therapy of autoimmune diseases Written by internationally respected scientists this book will appeal to basic scientists clinicians drug development researchers and advanced students alike
