Cancer And Chemotherapy:

Handbook of Cancer Chemotherapy Roland T. Skeel, Samir N. Khleif, 2011 Skeel's Handbook of Cancer Chemotherapy combines in one place the most current rationale and specific details necessary to safely administer chemotherapy for most adult cancers. The handbook is a practical, disease-focused pocket reference that emphasizes the best current medical practice as it relates to the delivery of chemotherapeutic drugs. By focusing on specific plans for treatment, the book is an invaluable resource for the daily care of cancer patients.

The Cancer Chemotherapy Handbook David S. Fischer, Mary Kathryn Tish Knobf, Henry J. Durivage, 1997 Concisely written yet comprehensive in scope, this new edition is a practical guide to the medical care and chemotherapeutic treatment of cancer patients. It is formatted for easy access to the more than 85 specific drugs currently used in cancer treatment.

Cancer Chemotherapy: Concepts, Clinical Investigations and Therapeutic Advances Franco M. Muggia, 2012-12-06 Experimental chemotherapy continues to be at the forefront of cancer therapeutics. Topics covered in the preceding volume on cancer chemotherapy in this series, such as study of drugs by alkaline elution, the development of the antimetabolite tiazofurin, and the treatment of germ cell tumors, have become informative references to current experimentalists and practitioners. In even earlier volumes, reviews of the platinum compounds, anthracyclines, and osteosarcoma represent topics associated with such rapid progress requiring a look back to provide the appropriate perspective. Similarly, we venture to predict that the topics in this volume will become useful landmarks for future drug development and disease strategies. In the area of drug development, what is being learned about old established antineoplastics is raising renewed expectations that it will be translated into improved applications and patient benefit. For example, we now have the ability to modulate the action of alkylating agents and fluorinated pyrimidines to achieve greater sensitivity. A new compound for an old target, trimetrexate, an antifolate that does not polyglutamate, will have a role not only in treatment of neoplastic diseases but also protozoal infection.

Cancer Chemotherapy: an Introduction Terry J. Priestman, 2012-12-06 This book is intended as an introduction to the drug treatment of cancer. It is almost ten years since the last edition was written. In the intervening time, there have been numerous developments in cancer chemotherapy, and in order to cover these, the majority of the text has been completely revised and rewritten. In addition, two new chapters have been introduced: one on the safe handling of cytotoxic drugs and the other on biological response modifiers. In order to incorporate this new information without any undue increase in the length of the text, the chapters on a combined approach to treatment have been omitted. This is not because interdisciplinary collaboration is no longer considered important, but is a reflection of the fact that in most centres, it has become the norm in cancer management and its central role in successful treatment no longer needs to be stressed quite so strongly. The four chapters in the last edition, which dealt with the team approach to cancer therapy, have been replaced by a single chapter on the place of chemotherapy in the overall treatment of cancer. Unfortunately, despite all the innovations of the last decade, it has become increasingly

clear that much of the promise offered by drug treatment during the 1960s and 1970s has not been fulfilled

Adverse Effects of Cancer Chemotherapy: Anything New to Improve Tolerance and Reduce Sequelae? Kulmira Nurgali, R. Thomas Jagoe, Raquel Abalo, 2018-06-12 Advances in anti cancer chemotherapy over recent years have led to improved efficacy in curing or controlling many cancers Some chemotherapy related side effects are well recognized and include nausea vomiting bone marrow suppression peripheral neuropathy cardiac and skeletal muscle dysfunction and renal impairment However it is becoming clearer that some chemotherapy related adverse effects may persist even in long term cancer survivors Problems such as cognitive cardiovascular and gastrointestinal dysfunction and neuropathy may lead to substantial long term morbidity Despite improvements in treatments to counteract acute chemotherapy induced adverse effects they are often incompletely effective Furthermore counter measures for some acute side effects and many potential longer term sequelae of anti cancer chemotherapy have not been developed Thus new insights into prevalence and mechanisms of cancer chemotherapy related side effects are needed and new approaches to improving tolerance and reduce sequelae of cancer chemotherapy are urgently needed The present Research Topic focuses on adverse effects and sequelae of chemotherapy and strategies to counteract them

Cancer Chemo- and Immunopharmacology G. Mathe, F. M. Muggia, 2012-12-06 Local treatment cures about 30 to 40% of cancers this proportion depending on the follow up required to establish it This means that 60 to 70% of the malignant neoplasias are disseminated either perceptibly leukemias visible metastases or imperceptibly forming a minimal imperceptible disease which local treatment leaves whether it consists of surgery radiotherapy or surgery plus radiotherapy When the neoplastic tissue is voluminous enough to be perceptible cures can be obtained with chemotherapy or chemo immunotherapy When the neoplastic disease is imperceptible made up of micrometastases it apparently can be cured by systemic postsurgical chemotherapy immunotherapy or chemoimmunotherapy Hence there is the need for intensive development of these medical therapies which are applied by the medical oncologist and at present consist of chemotherapy immunotherapy or chemoimmunotherapy These medical therapeutics can only grow with scientific development the main weapon of which is experimental and clinical pharmacology These volumes report the communications presented at the 1979 EORTC Annual Plenary Session on Cancer Chemo and Immunopharmacology
