Cancer As An Environmental Disease:

Cancer as an Environmental Disease P. Nicolopoulou-Stamati, Luc Hens, 2004-03-31 Controversial topic because many of the proposed solutions or policies may damage the economy in the short term in order to reap health benefits which will only become apparent several decades in the future Each chapter is written by experts in the field throughout the world

Cancer as an Environmental Disease Polyxeni Nicolopoulou-Stamati, Luc Hens, Vyvyan C. Howard, N. Van Larebeke, 2004-04-30 These pages contain a number of chapters from specialists in the field who consider from a number of different perspectives the currently available evidence that supports the environmental cancer aetiology hypothesis This constitutes the first part of the book In the second part of the book an examination of the policy implications of accepting that the cancer epidemic may essentially be preventable is presented This will pose some difficult problems for politicians and decision makers who will have to consider adopting policies that may damage the economy in the short term in order to reap health benefits which will only become apparent several decades in the future

Reducing Environmental Cancer Risk: What We Can Do Now LaSalle D. Leffall, Margaret L. Kripke, 2010-11-22 The statistics are staggering this year 1 5 million Americans will be diagnosed with cancer and more than 550 000 will die from the disease One underlying cause of these high numbers may be the failure of the US government to regulate toxic substances The President s Cancer Panel Report examines the risks posed by the chemicals in our environment and offers suggestions on what we can do to improve public health and safety In the strongest words it urges the President to use the power of your office to remove the carcinogens and other toxins from our food water and air that needlessly increase health care costs cripple our Nation s productivity and devastate American lives

Environmental Factors, Genes, and the Development of Human Cancers Deodutta Roy, M. Tevfik Dorak, 2010-09-11 Cancer is a complex disease Only 5 10% of human cancers are hereditary in nature Many of us think of environmental agents when we think of carcinogens The environment includes all that surrounds us and environmental influences include not only chemical physical and biological toxicants but also diet and lifestyle In this broadest sense the environment contributes substantially in the development of human cancer This book will describe how environment contributes to malignant transformation leading to profound changes in the genetic and signaling networks that control the functioning of the cell It will critically discuss the understanding of the effects of environment on the development progression and metastasis of cancer with current knowledge of the signaling networks that support functioning of transformed human cells Genes and environmental factors that influence the origins of cancer are not necessarily the same as those that contribute to its progression and metastasis Susceptibility gene variants for each specific cancer are being identified with emerging evidence of gene environment interaction Gene environment interactions will be discussed through each specific cancer based approach to address the question of how genetic variations can influence susceptibility to the individual type of cancer It will also highlight and summarize epigenetic changes that increase the risk for susceptibility to a

particular type of cancer particularly in the presence of specific environmental factors Thus this book will contain chapters from the world s experts focused on the current evidences that support the role of environment in the cancer etiology and in the growth of malignant lesions and discuss who may be susceptible to environmental influences
