Abstract: With the globalization of environmental issues, the impact of environmental pollution on people's lives has become increasingly important. Environmental issues have become increasingly urgent for governments and people in Canada and the United States, primarily due to the growing popularity of industrialization and urbanization. With the longest Canada-U.S. border in the world, the two countries' environmental relationship will directly impact environmental issues on both sides of the border. In terms of environmental policies and diplomatic relations, both countries played an excellent role as the first group of developed countries to emerge from the environmental movement. Based on many scholars' explorations and perspectives on the environmental relationship between Canada and the United States, this article will focus on the environmental policies of the two countries in the mid-to-late 20th century, exploring cross-governmental interactions as well as cross-border scientific and technological collaboration in the context of environmental policies from both countries. Meanwhile, the United States, the most powerful country of the period, has been a role model and an object of imitation in the environmental field for Canada and other countries. However, as the closest neighborhood, the United States has influenced Canada's environmental development positively and negatively, either directly or indirectly.

Keywords: Canada-US relations, international politics, environmental policy

1. Introduction

Throughout the second half of the 20th century, environmental issues became increasingly important to the international community. Due to the rapid economic development of developed countries during the first half of the twentieth century, the living environment deteriorated, leading to a series of harmful consequences. In the face of severe environmental problems, environmental thinking began to emerge first in these developed countries, with the United States as the leader of the environmental movement and Canada following in the footsteps of the United States. As long-standing neighbors, Canada and the United States have long had close ties in politics, economics, culture and diplomacy. Thus, the United States has often played a vital and active role in this relationship. Moreover, the interconnectedness of the two countries' geographic locations has led to complex and multifaceted environmental relations between the two countries.

Moreover, although Canada-U.S. relations have been a significant area of study for many scholars, there have been more results regarding Canadian and American policy studies. However, the 1960s and 1970s are critical periods in studying Canadian and U.S. environmental policy and history that are difficult to bypass. Scholars have paid insufficient attention to the place this period occupies in
