#### Canadian Mathematical Society 19451995 Vol 1 Mathematics In Canada:

A History of Mathematics in the United States and Canada David E. Zitarelli, Della Dumbaugh, Stephen F. Kennedy, 2022-07-28 This is the first truly comprehensive and thorough history of the development of a mathematical community in the United States and Canada This second volume starts at the turn of the twentieth century with a mathematical community that is firmly established and traces its growth over the next forty years at the end of which the American mathematical community is pre eminent in the world In the preface to the first volume of this work Zitarelli reveals his animating philosophy I find that the human factor lends life and vitality to any subject History of mathematics in the Zitarelli conception is not just a collection of abstract ideas and their development It is a community of people and practices joining together to understand perpetuate and advance those ideas and each other Telling the story of mathematics means telling the stories of these people their accomplishments and triumphs the institutions and structures they built their interpersonal and scientific interactions and their failures and shortcomings One of the most hopeful developments of the period 1900 1941 in American mathematics was the opening of the community to previously excluded populations Increasing numbers of women were welcomed into mathematics many of whom including Anna Pell Wheeler Olive Hazlett and Mayme Logsdon are profiled in these pages Black mathematicians were often systemically excluded during this period but in spite of the obstacles Elbert Frank Cox Dudley Woodard David Blackwell and others built careers of significant accomplishment that are described here The effect on the substantial community of European immigrants is detailed through the stories of dozens of individuals In clear and compelling prose Zitarelli Dumbaugh and Kennedy spin a tale accessible to experts general readers and anyone interested in the history of science in North America Canadian Mathematical Society, 1945-1995: Mathematics in Canada Canadian Mathematical Society, 1995 Mathematics Unbound: The Evolution of an International Mathematical Research Community, 1800-1945 Karen Hunger Parshall, 2002 Although today s mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom thegoal of mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians and mathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today's international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is

essential reading for anyone interested n the history of modern mathematics. It will be of interest to mathematicians historians of mathematics and historians of science in general Canadian Mathematical Society, 1945-1995: Invited papers Canadian Mathematical Society, Peter A. Fillmore, 1995 Mathematics in Victorian Britain photographer and broadcaster Foreword by Dr Adam Hart-Davis, 2011-09-29 During the Victorian era industrial and economic growth led to a phenomenal rise in productivity and invention That spirit of creativity and ingenuity was reflected in the massive expansion in scope and complexity of many scientific disciplines during this time with subjects evolving rapidly and the creation of many new disciplines The subject of mathematics was no exception and many of the advances made by mathematicians during the Victorian period are still familiar today matrices vectors Boolean algebra histograms and standard deviation were just some of the innovations pioneered by these mathematicians This book constitutes perhaps the first general survey of the mathematics of the Victorian period It assembles in a single source research on the history of Victorian mathematics that would otherwise be out of the reach of the general reader It charts the growth and institutional development of mathematics as a profession through the course of the 19th century in England Scotland Ireland and across the British Empire It then focuses on developments in specific mathematical areas with chapters ranging from developments in pure mathematical topics such as geometry algebra and logic to Victorian work in the applied side of the subject including statistics calculating machines and astronomy Along the way we encounter a host of mathematical scholars some very well known such as Charles Babbage James Clerk Maxwell Florence Nightingale and Lewis Carroll others largely forgotten but who all contributed to the development of Victorian mathematics Canadian Mathematical Society, 1945-1995: Selecta Canadian Mathematical The Man Who Saved Geometry Siobhan Roberts, 2024-10-29 An illuminating biography of one of the Society, 1995 greatest geometers of the twentieth century Driven by a profound love of shapes and symmetries Donald Coxeter 1907 2003 preserved the tradition of classical geometry when it was under attack by influential mathematicians who promoted a more algebraic and austere approach His essential contributions include the famed Coxeter groups and Coxeter diagrams tools developed through his deep understanding of mathematical symmetry The Man Who Saved Geometry tells the story of Coxeter's life and work placing him alongside history's greatest geometers from Pythagoras and Plato to Archimedes and Euclid and it reveals how Coxeter's boundless creativity reflects the adventurous ever evolving nature of geometry itself With an incisive touching foreword by Douglas R Hofstadter The Man Who Saved Geometry is an unforgettable portrait of a visionary mathematician Scholarly Communication in the Next Millennium Canadian Journal of Communication Corporation, 1997 Profound changes in the production acquisition and use of scientific and scholarly knowledge have occurred since World War II Scholarly Communication in the Next Millennium explores a rich mosaic of issues from technical to ethical science to humanities authors to readers students to scholars presented by electronic publishers information specialists librarians government officials scholars associations business consultants and researchers in the field

Their inspired considerations and recommendations are presented here along with a synopsis of the policy priorities and actions recommended by the participants Scholarly Communication in the Next Millennium Selected Papers from Canada s Policy Conference a special issue of the Canadian Journal of Communication Vol 22 No 34 is essential reading for anyone concerned with the future of scholarly publishing and the effects of electronic technology **King of Infinite Space** Siobhan Roberts, 2009-05-26 There is perhaps no better way to prepare for the scientific breakthroughs of tomorrow than to learn the language of geometry Brian Greene author of The Elegant Universe The word geometry brings to mind an array of mathematical images circles triangles the Pythagorean Theorem Yet geometry is so much more than shapes and numbers indeed it governs much of our lives from architecture and microchips to car design animated movies the molecules of food even our own body chemistry And as Siobhan Roberts elegantly conveys in The King of Infinite Space there can be no better guide to the majesty of geometry than Donald Coxeter perhaps the greatest geometer of the twentieth century Many of the greatest names in intellectual history Pythagoras Plato Archimedes Euclid were geometers and their creativity and achievements illuminate those of Coxeter revealing geometry to be a living ever evolving endeavor an intellectual adventure that has always been a building block of civilization Coxeter's special contributions his famed Coxeter groups and Coxeter diagrams have been called by other mathematicians tools as essential as numbers themselves but his greatest achievement was to almost single handedly preserve the tradition of classical geometry when it was under attack in a mathematical era that valued all things austere and rational Coxeter also inspired many outside the field of mathematics Artist M C Escher credited Coxeter with triggering his legendary Circle Limit patterns while futurist inventor Buckminster Fuller acknowledged that his famed geodesic dome owed much to Coxeter's vision The King of Infinite Space is an elegant portal into the Mathematical Reviews .2000 fascinating arcane world of geometry Algebra and Algebraic Thinking in School Mathematics Carole E.
